

S 01

UNIT: - 1 - Challenges of Contemporary Indian Society and Education:

Diversity - Diversity is understood to mean difference or variation. As we know, the entire world is filled with diversities such as caste, religion, dialect, language, and social differences, etc. That is, diversities are found in all areas of life. A person also acquires diversity on the basis of caste, religion, attitude, physical size, abilities, etc.

Diversity is related to ability, gender, race, anxiety level, disability, gender behavior, or religion.

Our entire nature is full of diversities. This diversity exists in the form of different types of living organisms, trees, plants, topographies, etc. The beauty of nature itself is a collection of different forms, colors, capacities, temperaments, languages, costumes, food habits, etc., in our society. This diversity itself is the beauty of our society. Our society respects diversities.

Types of Diversity:- The types of diversity are as follows –

i) Regional or Geographical Diversity

2

ii) Linguistic Diversity

iii) Ethnic or Caste-based Diversity

iv) Religious Diversity

v) Cultural Diversity

vi) Racial Diversity

Diversity in the Context of Education:

FPS OFFICIAL

Diversity in the context of education is as follows –

i) India is a country full of diversity. Every Indian is proud of this diversity. Therefore, the function of education is to develop the value of unity in diversity.

ii) Education develops a sense of respect toward diversity among students.

iii) In India, diversity is found at linguistic, regional, gender, caste, and religious levels. We acquire knowledge of all these through education.

- iv) Education is the very medium through which we can obtain knowledge of diversity and the facts related to it.
- v) Education and diversity complement each other in India.
- vi) Information regarding the diversity of Indian society, such as religions, traditions, festivals, civilization, and culture, etc., is obtained by us only through education.

3

--- PAGE 3 ---

- vii) Education is required to know diversity and to understand its various aspects.
- viii) While education gives knowledge to people, diversity creates interest/curiosity in it.

The characteristics of diversity are as follows:

- 1) Due to diversity, a feeling of mutual respect develops toward one another.
- 2) Diversity gives birth to a broad perspective.
- 3) A feeling of brotherhood develops in the society.
- 4) Qualities such as benevolence, assistance, and strong willpower are developed.
- 5) Because of diversity, we can understand each other with ease/readiness.

TEACH EXTRA & ALPS OFFICIAL

Inequality

Inequality refers to discrimination on the basis of caste, religion, language, cultural traditions, beliefs, gender, etc. That is, the variation that arises in social prestige, rights, and opportunities due to differences in caste, race, occupation, income, property, education, political influence, social, and morality is called inequality.

4

--- PAGE 4 ---

The lower class, disabled people, women, etc., suffer from discrimination based on inequality.

The state of not being equal is inequality.

Types of Inequality

- i) Male-Female Inequalities
- ii) Rural-Urban Inequalities
- iii) Regional Inequalities

iv) Educational Inequalities

v) Scheduled Castes and Non-Scheduled Castes Inequalities

The adverse consequences of inequality are affecting our society in a widespread manner:

vi) Mutual love, brotherhood, humanity, humanness, and morality are disappearing from the society.

vii) Due to personal selfishness, society is being divided into caste and religion.

viii) Exploitation of women is increasing.

ix) The gap between the rich and the poor is increasing in society.

x) The foundation of economic and social justice is weakening.

xi) The education of the deprived and exploited classes is falling behind.

xii) Due to educational inequality, the standard of education is declining.

5

--- PAGE 5 ---

Inequality arises from the unequal distribution of means of development, in which people of the same society are forced to live in different conditions.

Deprivation (Vanchana):

Deprivation means that when a child, while living in society, is unable to fulfill his social, economic, and educational needs and remains deprived of them, it is called deprivation.

Deprivation is the absence of necessary and otherwise neglected experiential stimuli linked to social, economic, and cultural environments, as a result of which the child's desired development cannot take place.

The meaning of deprivation is associated with scarcity, lack, etc.

EXTRA

Types of Deprivation - Deprivation is of two types:

1. Absolute Deprivation (Vaastavik Vanchana)

2. Relative Deprivation (Saapekshik Vanchana)

1) Absolute Deprivation - When an individual or group is struggling for the basic necessities of life and despite this struggle remains deprived of those facilities, or is physically or mentally so incapable that despite the availability of general facilities, they are unable to utilize them, this type of deprivation is called absolute deprivation.

2) Relative Deprivation - When an individual or group feels deprived of physical resources, social prestige, or any other reason in comparison to another individual or group, then this feeling of deprivation is called relative deprivation.

Deprivation has the following characteristics:

- i) A deprived child suffers from a negative self-concept.
- ii) The level of aspiration is also low in a deprived child.
- iii) Deprived children suffer from an inferiority complex.
- iv) The socio-economic status of deprived children is low.
- v) Such children also suffer from a sense of insecurity.
- vi) The educational achievement of a deprived child is of a low standard.
- vii) The learning progress of deprived children is also relatively slow.

OFFICIAL

Main reasons for the generation of the feeling of deprivation in children:

TEACH EXTRA

- Anxiety about earning a livelihood from a young age.
- Lack of motivation to acquire education.
- Facing a discriminatory environment in schools.
- Living amidst fights, quarrels, and vulgarity in the family and neighborhood.
- Living with family in dirty, unhealthy places.

Economically weak.

Redressal / Solutions -:

- The environment of the educational institution should be inspiring.
- Creativity should be encouraged.
- Vocational education should be organized.

- To prevent the feeling of inferiority, class-wise facilities should be provided instead of caste-based reservation. Attention should be paid to giving prominence to the economic level rather than caste and religion in the deprived class.
- The habit of making independent decisions should be instilled in children.

Authority in Society -:

The word 'Satta' is the Hindi translation of the English word **Authority**, which is derived from the Latin word **Auctoritas**, meaning consensus or acceptance.

Generally, it can be said that no governance can function without authority. Authority is associated with every aspect of human life, such as the authority of the captain in a team, the authority of the father in a family, the authority of the party chief in a political party, the authority of the principal in a school, etc.

8

--- PAGE 8 ---

According to **Robert Nisbet**, "Where there is no authority, there is no institution."

According to the **Encyclopedia of Social Sciences**, "Authority is that innate or acquired ability by which superiority is established over a group. It is the expression of power, and it indicates the fact that the individuals subordinate to it obey it."

According to **Jouvenel**: "By authority, I mean the quality of gaining the compliance of another person."

The conclusion drawn from all these definitions is that the basis of authority is rational and legitimate.

Nature of Authority- Regarding the nature of authority, **Beach** has given two theories:

1. Authority Theory (Satta Siddhant)
2. Acceptance Theory (Svikrit Siddhant)

1) Authority Theory – According to this theory, the authority holder has the right to give orders to their subordinates.

2) Acceptance Theory - To what extent subordinate employees follow the orders given by high officials is called the acceptance theory.

Types of Authority - On the basis of Max Weber's legitimacy, authority is of three types:

9

1. **Traditional** - A person obtains the right to rule from traditions. Traditions give him the governance through which he controls other individuals and imposes his desires upon them.
2. **Charismatic Authority:** This word was first used by Troeltsch. The literal meaning of charisma is 'God's gift'. When a person acquires authority due to their own personality, psychological capacity, and personal traits, it is called charismatic authority.
3. **Rational-Legal Authority** - A person is appointed to a post under prescribed rules, procedures, etc., and exercises power within the system of duties or rights associated with that post.

The factors affecting authority are as follows:-

- 1) **Political factors** - Authority in the social system is a major means of public welfare, and control over political authority is an essential condition for formulating public welfare policies.
- 2) **Social factors** - Unless there is social acceptance of the policies and laws formulated at the governance level, they cannot be implemented effectively.
- 3) **Economic factors** - Finance is required for the smooth implementation of policies and programs created by the authority.

10

- 4) **Constitutional factors** - In a modern democratic country, the most prominent factor affecting authority is constitutional law, which establishes the supremacy of authority in society.
- 5) **Ideas and Values** – Which party and ideology will gain power in society depends to a large extent on its ideas and values.

Hegemony / Dominance (Varchasva):-

When a group exercises political, economic, ideological, or social dominance over other groups, it is called hegemony.

Hegemony is of three types:-

EXTRA & FPS OFFICIAL

- 1) **Military Hegemony** - Military hegemony is the main basis for maintaining dominance over any country or group. If a country's military power is superior, it can dominate any country on the strength of its might and power.
- 2) **Economic Hegemony** – Economic hegemony means maintaining dominance over the world economy. If a country's economic condition remains strong, it can rule over another country based on its strong economy.

3) Cultural Hegemony - Through cultural hegemony, a country can make its heritage, culture, and civilization stronger and more influential than other countries.

Factors affecting hegemony in education:-

11

--- PAGE 11 ---

i) Economic factor – In society, the elite class reserves admission seats in good educational institutions or schools for their children through heavy donation amounts, preventing relatively meritorious and talented students from getting admission, thereby affecting their education.

ii) Academic performance factor - In order to score well in the academic progress of the school, children of wealthy parents often pressure school teachers to get good marks in examinations, which infuses despair and frustration among the meritorious students of the class.

iii) Qualification related factor - In a developing country like India, where there is already a lack of public awareness, prioritizing dominant unqualified individuals over qualified individuals leads to a decline in the standard of education.

EXTRA & AFPS OFFICIAL

Impact of Hegemony -

i) Due to the hegemony of the dominant class, no changes take place in educational policies until the hegemony of another ideology is established in society.

ii) The dominant class of society affects every aspect of society, directly or indirectly, whether it is social, cultural, religious, or economic. Education cannot remain unaffected by these dominant groups.

12

--- PAGE 12 ---

iii) The ideology of the individuals who hold hegemony in a country shapes the governmental, administrative, and educational policies around that very ideology.

Resistance (Pratirodh):

Resistance means opposition. An individual or group that goes against the rules and laws of society and opposes them is called resistance.

Types of Resistance:

XTRA

i) Micro Resistance - An individual resists the orthodoxies and social evils of society on a personal level and tries to infuse awareness among people by making them aware of these prevalent evils.

ii) Moderate Resistance - A group of individuals resists the discriminatory norms and social orthodoxies of society, and this resistance is directed against those social beliefs.

iii) Widespread/Macro Resistance- A widespread resistance is carried out by a large community of society against certain traditional orthodoxies (illiteracy, barbarism, etc.).

13

--- PAGE 13 ---

Factors of resistance in contemporary Indian society are as follows:-

i) Social factors - Prevalent traditions, beliefs, and orthodoxies in society have proven to be irrelevant in the modern era, and when these beliefs are forcibly imposed on society, social resistance arises against them.

i) Administrative factors :- Sometimes social resistance arises due to a faulty governance system or the unjust administration of administrative units.

iii) Economic factors - Due to the unequal distribution of economic resources in modern Indian society, the capitalist class dominates the economic resources, causing the gap between the rich and the poor to widen further.

iv) Political factors – In the Indian Constitution, all citizens of India have equal political rights, but in reality, power has remained confined to the hands of a few elite people, against which political resistance is seen till date.

Equity (Samta):

The general meaning of equity is to provide equal conditions to everyone. It does not mean making everyone identical. Examples of equity include giving equal pay to everyone, giving equal houses to everyone, giving identical respect to everyone, etc. Equity removes the prevailing inequality in society and brings everyone to an equal status.

14

--- PAGE 14 ---

A brief synonym for equity is also the feeling of being equal. Equity is a moral judgment and is subjective.

Equality (Samaanata) :-

'Equality' means treating everyone equally. The real meaning of equality is giving identical conditions to everyone. We cannot make everyone completely identical, but equal conditions can definitely be created. To facilitate education, all people of society, regardless of their caste, religion, or gender, have been given equal rights.

"Everyone gets the same work - this is equity" and "Equal conditions are available for everyone to get work - this is equality."

Difference between Equity and Equality :-

Equity - While using the word equity, it is assumed that everyone is not equal. There are some who are more exploited or backward compared to other people, such as a disabled person. Providing them with opportunities equal to normal people would be an injustice to them. There should be an abundance of opportunities for them so that they can come on the same platform with others.

Equality - Equality means treating everyone identically so that no one can take unwanted advantage of their special circumstances. Everyone gets equal opportunities in which everyone moves forward based on their respective talent.

15

--- PAGE 15 ---

Example - : In a class, all students are equal for a teacher, but some children may have a problem, such as visual impairment. Now, seating the child with weak eyesight in the front row is to provide him with opportunities equal to other students, not to grant him special importance. This is called equity. Seating all students with normal vision together or providing them with equal opportunities to sit in the front row will be called equality.

Social Justice :-

Social justice refers to that justice which is provided to the members of all classes of society in the social system without any discrimination. It assures every individual of achieving an appropriate place in society. It inspires the removal of whatever difficulties come in achieving an equal level. Under social justice, there is a right for every individual to achieve their holistic development. Social justice means an equal place for everyone in society.

Need for Social Justice :-

16

--- PAGE 16 ---

- i) To ensure rights to every individual so that holistic development takes place.
- ii) So that no injustice occurs to anyone, because failure to get justice generates outrage.
- iii) There should be no discrimination between the rich and the poor because it widens the gap.
- iv) So that fraternity, equality, etc., can be promoted.
- v) Social justice is required to develop the ideal qualities of society in everyone.

Areas of Equality :-

- i) Civil Rights
- ii) Political Rights
- iii) Economic Rights
- iv) Social Rights
- v) Cultural Rights

UNIT – 2 Contemporary Issues of Education

Modernization - Meaning of Modernization -

Aligning social, economic, industrial, and religious organizations, moral values, inspirations, achievements, and aspirations with other advanced societies is modernization. Modernization is a process that is dynamic. It brings change in a traditional society through human usage of physical resources in a technical form. This is a progressive and forward-moving process.

The characteristics of modernization are as follows:-

- I. It is a universal process of change that takes place at all places or locations.
- II. Modernization is the soul of science and technological development.
- III. Modernization leads to increase in different types of knowledge and experience.
- IV. Diffusion of education takes place.
- V. It is a dynamic process.
- VI. It brings change in social structure.
- VII. New ideas are accepted in modernization.

18

According to **Daniel Lerner** - "Modernity is a state of mind connected with progress, advancement towards prosperity, and readiness for adaptation."

The benefits of modernization are as follows -

- 1) Facility of mass media - Various media of mass communication like telephone, mobile, cinema, radio, and TV, etc., play an important role in disseminating modern thoughts. Through these, a new ideology, technology, and mental perspective are developed, which broadens the perspective of education.
- 2) Facility of continuous non-formal and distance education - Due to modernization, there has been a continuous increase in communication tools through which various educational programs are broadcasted via satellite. Through these, a person can easily view and listen to programs from far away at their home.
- 3) The capacity to solve problems develops.
- 4) Development of science and technical education takes place.
- 5) Modernization prevents urbanization and industrialization from becoming uncontrolled.

19

Disadvantages of Modernization :-

While modernization gives a new direction to the nation and society, there are also some disadvantages, which are as follows:-

- 1) Due to modernization, new types of crimes are increasing in society.
- 2) Through modernization, students are starting to disregard social values and traditions.
- 3) Modernization causes students and society to ignore the importance of their past.
- 4) Society is starting to overlook traditional techniques and methods.
- 5) Damage is being caused to traditional ideals and values.

ACHTRA & AEPS OFFICIAL

Impact of Modernization on Education:

Modernization is a form of social change whose goal is to maximize the economic progress and development of the country through education. Modernization has the following impacts on education:-

- 1) Improvement in the condition of schools
- 2) Increase in the number of schools

3) Rapid increase in the number of schools.

20

--- PAGE 20 ---

Globalization :-

Globalization means connecting the economy of a country with the economies of other countries of the world. Globalization means integrating the country's economy with the world economy so that the entire world can function as a single economy and a single market.

According to **Robertson** - "Globalization is a concept that relates to the consciousness and intimacy of the entire world."

Globalization is a process in which all countries of the world remain connected with each other socially, economically, and politically. At present, the economies of the entire world are interconnected, which is an appropriate example of globalization. Therefore, through globalization, along with Foreign Direct Investment (FDI) in a developing country like India, the transfer of technology is taking place, making consumer goods with high production capacity and appropriate pricing available in India at efficient costs.

TEACH EXTRA & AFPS OFFICIAL

The characteristics of globalization are as follows:

- I. Globalization is an effort moving towards 'One World - One State'.
- II. Globalization is a process of translating cooperation, mutual interdependence, and mutual relations into practice.
- III. Globalization is a process of reducing distances.
- IV. Globalization is a process of bringing the economies of states closer.

21

--- PAGE 21 ---

- V. It is an activity whose nature is multifaceted, such as social, cultural, intellectual, and technical, etc.

Impact of Globalization on Education :-

Globalization is a worldwide process. The process of globalization has affected every sector of society. The process of globalization has greatly affected education, the most important sector of society. It is an economic process because at present, market policies apply to all places, even if it is education. Globalization has affected education in both positive and negative ways.

1) Positive impact of globalization on education – Increase in literacy, easy availability of the latest means of information technology and communication technology in education, creation of employment opportunities, unrestricted global exchange of knowledge and technology, giving concrete shape to the concept of global education through acculturation, etc., indicate the positive effects of globalization on education.

2) Negative impact of globalization on education - Due to globalization, the tendency to view education from an economic perspective has increased. Education has remained a market commodity, which has come to be linked with productivity. Education has become a commercial process instead of a spiritual and moral process.

22

--- PAGE 22 ---

Social Change and Education :

Social change is made up of two words - society and change. Society does not mean merely a group of individuals, but rather the relationships that individuals living in a group have among themselves; the organized form of those relationships is called society. Society is a web of social relationships. Change means modification, i.e., change from the previous state. The difference or change coming between the previous state and today's state is change. In this way, the difference coming between the previous state of society and today's state is social change.

AEPS OFFICIAL

The difference that comes about in social organization, structure, relationships, or the ways, customs, values, and beliefs of society is called social change.

According to **Johnson** - "Social change refers to the changes arising in the ways of acting and thinking of individuals; this itself is called social change."

The characteristics of social change are as follows -

- i) Social change is found universally and ubiquitously in every society.
- ii) It moves along with time.
- iii) Social change is abstract.

23

--- PAGE 23 ---

- iv) It is not permanent but continuously dynamic.
- v) It is a complex process. It takes time to develop.
- vi) Social change affects every community of society.
- vii) It is not found equally in every society. Its level is sometimes high and sometimes low.

The process of social change can be clarified as follows:-

- i) Change in the experiences of an individual is a process of social change.
- ii) Change in an individual's attitude is a part of the process of social change.
- iii) Change in social relationships is a process of social change.
- iv) Change in social structure and change in the thought patterns of individuals.

TRA & AEPS OFFICIAL

Role of Teacher in Social Change -

A teacher plays an important role in social change. A child is taught the first lesson of socialization in his home itself, but after parents, the teacher has the most crucial role in the child's socialization. The role of a teacher in social change can be explained through the following points –

- i) Teachers protect and transfer their culture through new values.

24

--- PAGE 24 ---

- ii) A teacher can bring social change by behaving impartially and with equality toward all children.
- iii) A teacher accelerates social change by providing a maximally free environment to children so that their personality can be fully developed.
- iv) A teacher should not discriminate on the basis of class differences due to social and economic conditions among children.
- v) A teacher plays a crucial role in social change by developing the social, moral, cultural, and overall personality of children.
- vi) A teacher discards superstitions and social evils and gives importance to scientific and technical subjects, which proves helpful in the process of social change.
- vii) Students should have sweet relationships with teachers, and teachers with the principal, so that human qualities can develop in the school.
- viii) Collective activities should be organized in the school so that a spirit of cooperative and healthy competition develops among students.

Quality in Education :-

Quality in education is that standard level of education which affects the functional process of different factors. Improving the quality of education is a slow and gradual process. It can never

be said that education has reached the final stage of quality and no further improvement is possible or expected. Looking at the quality of education at present, a major deficiency is seen even in the education provided up to the primary level. While certain facilities such as libraries, teaching-learning materials, and other things are needed in schools for quality education, looking at this, there is a huge lack of resources in schools, which is a negative aspect of the level of quality education. Therefore, in the context of this discussion, the level of quality education means the acquisition of various competencies in the intellectual, cognitive, and emotional domains by children.

OFFICIAL

Important Dimensions of Quality in Education :-

- I. Infrastructure and other facilities.
- II. Management and community cooperation.
- III. School and classroom environment.
- IV. Curriculum and learning-teaching material.
- V. Teachers and their preparation.
- VI. Teaching-learning time.
- VII. Classroom behavior and processes.

Principles of Quality of Education :-

- I. The quality of education depends on encouragement, achievement, and motivation.
- II. Quality of education can be possible through the cooperative efforts of teachers, students, and parents.
- III. Creating an appropriate environment for both external and internal discipline increases the quality of education.
- IV. Quality comes in education through new teaching methods, work strategies, new experiences, and new efforts.
- V. The more child-centered education is made, the greater will be the educational reform and attitude towards excellent quality.

Public Education and Private Education -:

Public Education :-

Public education is that which is equal for everyone. When people come together for education, it is to promote the interest of people through education (equal for everyone and for what reason/why - for public interest), meaning being available to everyone and having the objective of promoting the interest of people through education is the meaning of public education.

27

--- PAGE 27 ---

Private Education -:

Private education means the method of working by keeping it outside the control of the government. This can be at an individual level or collective level. Privatization enjoys a monopoly. Privatization of education is beneficial and it has adverse consequences as well. Today, development is taking place rapidly across the whole world. Education has become the basis for the development of human resources.

Public Education versus Private Education :

I. Public education refers to that education where compulsory education is given to children of all sections and whose operation is carried out by the government. This education is provided to children free of cost. There is no participation of any private individual in this.

II. Private education refers to that education where education is indeed given to children of all sections but the operation is carried out by a private or commercial individual. There is no participation of the government of any kind in this.

III. It has become difficult for parents to make a decision between public education versus private education for their children. Which one among public or private education should they trust to educate a child for an excellent future?

28

--- PAGE 28 ---

Education for Deprived and Neglected Classes -:

Education for deprived and neglected classes implies that those sections which have been deprived of the achievement of education, such people are kept deprived of the general mainstream of education. It is a deep subject to think about that these people become victims of social evils and suffer from deprivation. Such people remain backward from the fundamental right to education. Education matters a lot for the deprived class because

the right to acquire education should belong to every class of person. If people of these classes are provided proper education, it plays a crucial role in social change.

Common School System -:

The Common School System is a concept of a school that teaches how to acquire education purely on the basis of merit. Neither wealth nor fame comes in its way. Giving proper and holistic education equally to children without any discrimination of religion, caste, gender, or class is the core objective of the common school system. The common school system refers to that system where children, whether they belong to any caste, race, religion, gender, or class, develop education together through an equal school management method to connect them with the appropriate mainstream. It means making children get their fundamental rights related to education in an equal spirit without any differentiation.

29

--- PAGE 29 ---

UNIT-3 Political and Constitutional Contexts of Education:

State -:

An organized unit that is under one governance is called a State. A State can be sovereign. Apart from this, any governmental unit or an administrative subdivision of it is called a state, for example, the provinces of India are called states.

According to **I. L. Kandel**: "A state can be defined as an organized political community which has a government that is recognized by it."

According to **Dr. G. D. H. Cole**: A state is a whole community which is a socially organized unit of its members.

TEACH EXTRA & AEPS OFFICIAL

Elements of a State:

- i) Population
- ii) Territory
- iii) Government

Democracy :-

Democracy is made up of two words, 'Lok' (People) and 'Tantra' (System), which means "Rule of the people". In the English language, 'Democracy' is made up of two Greek words, 'Demos' and 'Kratia'.

According to **Abraham Lincoln** - "Democracy is a system of governance which is of the people, by the people, and for the people."

According to **Seeley** - "Democracy is that government in which every person has a share."

According to **Dicey** - "Democracy is that form of government in which the governing body is a comparatively large fraction of the entire nation."

Education in the Context of the Indian Constitution :-

Free and Compulsory Education for Children [Article-21 A]

This Article provides that the State shall provide opportunities for early childhood care and education for all children up to the age of 6 to 14 years. The need to amend Article 45 arose because by the new Article 21 (A), free and compulsory education for all children of the age of 6 to 14 years was made a fundamental right, because the right to give education to children up to 14 years is an economic-constitutional right, but for higher education, this right will depend on the economic capacity of the State.

SHEXTRA EPS OFFICIAL

Prohibition of employment of children in factories, etc. [Article 24]

According to Article 24, no child below the age of 14 years shall be employed to work in any factory or in any hazardous employment. Under Articles 23 and 24, exploitation means using a person for one's own purposes. This is not only against the fundamental concept of our Constitution but also against the dignity of the individual.

Universalization of Education :-

Universalization of education implies educating the masses. Compulsory and free education should be arranged at every level of education so that obtaining education becomes accessible to every citizen. Through social justice and equality, the universalization of education can take place appropriately. Universalization is the Hindi translation of the English word 'Universalization'. This word was first used in England. When primary education was made compulsory and free in England, their objective at that time was to make education accessible to all children of a certain age group in the country. Education is a basic fundamental right for the overall development and empowerment of any individual and society; it also develops the society. The literal meaning of the universalization of education is, "ensuring the availability of education up to a certain level compulsorily and free of cost to all

people." Making education compulsorily available to all children is called the universalization of elementary education.

32

--- PAGE 32 ---

In India, the universalization of education implies making education 100% accessible to children from Class 1 to Class 8, ensuring that children do not leave school midway (100% retention), and passing 100% of children in Class 8.

According to **Dr. Radhakrishnan**- "Education is not merely a means of earning a livelihood but it is the birthplace of ideas. It is not only a school of citizenship but an entry path into spiritual life. Man gets trained in it for his soul and truth."

According to **S. N. Mukherjee**- "The government machinery of education has started working with some rapid speed, but still a lot of efforts are required. It should be linked with compulsory education for citizens."

The need and importance of universalization of education are as follows:

1) To meet the needs of daily life - A person receiving primary education can also become self-reliant to meet his daily life needs. He meets his daily needs such as writing letters to his relatives, operating mobiles, computers, keeping accounts of shopkeeping and business, etc.

33

--- PAGE 33 ---

2) Development of Personality - To ensure the holistic development of an individual, it is necessary for the person to be educated. It is necessary for him to receive education up to a certain age group and duration. The sublimation and regulation of an individual's innate instincts are possible only through education. Through education itself, a person is made aware, his inherent deficiencies are removed, and his development is carried out.

3) Helpful in making the illiterate literate - An educated person, along with himself, also makes the children of his family literate. Through education, he works to make his neighborhood, local community, and illiterate adults literate.

EXTRA & AFPS OFFICIAL

4) For making democracy successful: - Universal education has immense importance for the success of democracy. For the democratic development of any country, maximum propagation and diffusion of education are necessary. The success of democracy depends on the educational system prevailing in society.

5) Termination of Communalism - Through education itself, the holistic development of a child is carried out. The child constructs a clean society, community, and nation. Through education alone, he obtains knowledge of good and bad things as well as anti-social elements, and is able to differentiate among them.

Objectives of Universalization of Education

- i) Carrying out the physical and mental development of the child.
- ii) Carrying out the moral and character development of the child.
- iii) Carrying out the cultural development of the child.
- iv) Holistic development of personality.
- v) Developing social adjustment skills.
- vi) Developing rational decision-making capacity in him.

DS OFFICIAL

*** Right to Education Act - Act 2009** ensures free and compulsory quality primary education for all children from 6 to 14 years with the help of the state, family, and community. This Act is basically a modified form of the Right to Education Bill of the year 2005. In the year 2002, by the 86th amendment of the Constitution, through Part 3 of Article 21A, there was a provision to provide free and compulsory education to all children from 6 to 14 years. To make it effective, this Act was passed in the Lok Sabha on 4 August 2009, which came into force across the country on 1 April 2010.

The maximum benefit of this Act will be received by children of laborers, child laborers, children with special needs, or those children who remain deprived of education due to social, cultural, economic, linguistic, or other reasons.

Commenting on the rights of children in the Right to Education 2009 can be done through the following points:-

- I. Every child of the age of 6 to 14 years shall have the right to free and compulsory education in a neighborhood primary school until the completion of elementary education.
- II. No child shall be liable to pay any kind of fee until the completion of elementary education.
- III. If for any reason a child whose age is more than 6 years has not been able to complete his elementary education and later wants to seek admission to a class, he has the right to admission in a class according to his age, and has the right to receive free education subsequently.

EPS FE

- IV. If any child needs to get admission from one school to another school within or outside the state, he shall have the right to transfer according to his wish.

V. Teachers cannot subject any child to physical punishment or mental harassment.

36

--- PAGE 36 ---

Objectives of the Right to Education Act -

- i) Promoting education by providing free textbooks, uniforms, and scholarships to children.
- ii) Disseminating education to rural areas.
- iii) Improving the standard of good education in the country.
- iv) Promoting expenditure towards the education of children.
- v) Paying special attention to the education of girls.
- vi) Making primary education universally accessible and carrying out its universalization.
- vii) Giving basic education to all children from 6 to 14 years in the country.

A & AEPS OFFICIAL

National Development and Education :-

After achieving independence, efforts were made to give a national character to education. To adapt the educational system to the new circumstances of the country and for the development and expansion of education at various levels, efforts were made; a resolution was taken to make primary education free and compulsory. Consideration was given to making secondary education multi-purpose, and efforts were made to free and improve the standard of education in universities. Today the country faces many problems, facing them contentiously is not only for the identity of the country...

37

--- PAGE 37 ---

UNIT: - 4 Education and Social Expectations

Education :-

Education is a lifelong system. It is a continuously running dynamic process which keeps changing according to time, place, and circumstances. Education is considered a tri-polar process in which the teacher, student, and curriculum are considered important. Education is the basic means of human development. If any individual wants to achieve success in life, education is extremely essential for him. Sublimation of man's innate powers takes place through education. The higher the education, the more quickly and easily a man will solve the difficult situations of

his life. Education is a natural process that goes on from birth throughout life. Education protects human life. Education helps a human to blossom like a flower. Therefore, education is not merely a resource for earning a livelihood but it is a purposeful process.

According to **Dr. Bhimrao Ambedkar** - "Education is the milk of a tigress; whoever drinks it will roar."

According to **Socrates**:- "Education means bringing to light the universal ideas which are inherent in the mind of every man."

38

--- PAGE 38 ---

According to **Tagore**- "Education means making a child capable of discovering the eternal truth, making it his own, and expressing it."

According to **Mahatma Gandhi**- "By education, I mean an all-round drawing out of the best in the child and man's body, mind, and spirit."

The need and importance of education can be understood through the following points:-

I. For mental and intellectual development of an individual:-

Education is extremely necessary for mental and intellectual development. Education makes the mental and intellectual development of an individual better and helps him become a successful citizen of society.

TEXTRA OFFICIAL

II. For physical development –

The progress of any country depends only on its citizens. Aristotle's statement is that "A healthy mind resides in a healthy body."

III. Helpful in National Development -

The most important fact to bind our country into a thread of unity is that the feeling of nationality should be developed in an individual through education.

39

--- PAGE 39 ---

IV. Improvement in the condition of society -

Improvement in the social condition is extremely necessary because even today there are some areas of society where differences are seen between male-female, caste-religion, and high-low.

V. For spiritual development of man -

Spiritual development of an individual takes place only through education. Through spirituality, a person becomes restrained, peaceful, satisfied, and wise.

The functions of education are as follows :-

1) Functions related to society: -

- i) Providing man with knowledge of ancient literature.
- ii) Developing social feeling in him.
- iii) Providing him with knowledge of social rules. Developing sociality in man.
- iv) Giving knowledge to the individual regarding religions.

& AEPS OFFICIAL

2) Functions related to the individual :-

- i) Assisting in the preparation for future life.
- ii) Making the individual self-reliant.
- iii) Developing the complete personality of man.
- iv) Developing human qualities in man.
- v) Developing character and moral qualities of man.

40

--- PAGE 40 ---

- vi) Bringing positive improvement in the emotions of the individual.

3) Functions related to the environment :-

- i) Teaching the individual to adapt to the environment.
- ii) Assisting him in establishing harmony with the environment.

4) Functions related to the nation :-

- i) Assisting the individual in works related to public interest.
- ii) Establishing emotional integration.
- iii) Establishing national unity and assisting in national development.
- iv) Establishing national discipline.

YTRA & AEPS OFFICIAL

v) Making aware of human rights and duties.

Objectives of Education -

Education is the basis of human life because education alone fully develops all aspects of an individual's development. As a result of continuous modernization and change, human needs keep increasing. An individual has to remain continuously effortful for development, and fulfilling his needs is the main objective of education. Before knowing the main goals of education, it is necessary to know the meaning of objective. Whatever an individual wants to achieve in his life, that ideal state is called an objective. The literal meaning of objective is – showing direction.

41

--- PAGE 41 ---

Types of Education :-

- i) General Education
- ii) Narrow Education
- iii) Broader Education
- iv) Formal Education
- v) Informal Education
- vi) Indirect Education
- vii) Direct Education
- viii) Individual Education
- ix) Collective/Group Education
- x) Specific/Special Education
- xiii) Unconscious Education

TEACH EXTRA & AEPS OFFICIAL

42

--- PAGE 42 ---

School (Vidyalaya) :-

A school is such a specific environment where education of certain qualities and activities of life is given with the objective that the child's development takes place in the desired direction. A school is an important institution of

society. A school is a mirror from which the appropriate form of society is revealed. A school is a place where tomorrow's citizens, upon whose shoulders lies the future burden of society and nation, are nurtured. A school exerts a very important influence on children's conduct, thoughts, and character. The function of schools is to present the activities of society in a simple, pure, and balanced manner so that the child can learn them easily. Therefore, a school is the very institution where educational and co-educational activities are fully operated.

According to **Shri S. Balakrishna Joshi**: "The decision of someone's progress is not made in legislative assemblies, courts, and factories, but in the school."

According to **T. P. Nunn**: "A school should not be understood as a place where only certain knowledge is learned, but should be understood as a place where the activities of children are trained in those specific forms."

The need and importance of a school are as follows:-

1) School is an excellent place for versatile talent - Although the home and family are called the child's first school, yet the education that a child receives at

43

--- PAGE 43 ---

home is very narrow. In that education, a child cannot acquire the knowledge which he will acquire in a school.

2) Harmonious development of personality - Family, home, society, and religion, etc., are excellent means of education, but neither do they have any definite objective nor any pre-planned program.

3) Development of educated citizens - A school is the sole means through which educated citizens can be constructed. If all children of a country are given free and compulsory education up to a certain age, they become permanently literate.

4) Helpful in maintaining the continuity of society - A school is a miniature form of society. In it, the social heritage is kept secure and transferred to the coming generations.

5) Helpful in meeting needs - An educational environment suited to the interest and need of the child is created in the school so that he can meet his own needs and those of society by acquiring various types of knowledge.

Role of School:

i) Holistic development of personality

ii) Development of social values

44

--- PAGE 44 ---

iii) Knowledge of citizenship

- iv) Adjustment in society
- v) Development of social responsibility
- vi) Vocational training
- vii) Development of moral education and spirituality

Community (Samudaay) :-

Community refers to that neighborhood of individuals in which they reside, or a community is a group of two or more individuals who possess unity or a community feeling. It develops spontaneously to spend common life by common rules in a certain geographical area.

According to **K. Davis** - "Community is the smallest regional group within which all aspects of social life can fall."

EXTRA AFPS OFFICIAL

According to **Ogburn and Nimkoff** - "The entire organization of a total life within a limited area can be understood as a community."

Characteristics of a Community :-

- 1) There must be at least two individuals in a community.
- 2) A community has a definite geographical area, which can be small or large.

45

--- PAGE 45 ---

- 3) It can start from a small perimeter and become worldwide.
- 4) It is both a permanent and temporary group of humans.
- 5) Family, religious association, neighborhood, state, and nation are different forms of community.

Educational Functions of Community :-

- I. Establishment of educational institutions
- II. Formulation of educational objectives
- III. Provision of universal education
- IV. Proper control over educational institutions
- V. Free education at the primary level
- VI. Construction of curriculum

Difference between School and Community :

School -

- I. A school is such an institution where, under the direction of teachers, students are provided with a learning place and a learning environment to provide education.
- II. Providing a social environment to children. A school is required for the social development of students.
- III. In carrying out the holistic development of students.
- IV. This is a formal agency of education.

OFFICIAL

46

--- PAGE 46 ---

Community -

- I. A community is a group of individuals residing in a geographical area where all people live together and utilize their rights while serving and assisting one another.
- II. Establishing and maintaining schools.
- III. For the socialization of children and for bringing about social change on a large scale.
- IV. In establishing interrelationships between family and school. This is an informal agency of education.

ACH EXTRA & AEPS OFFICIAL

Innovation in Education -:

The word **Innovation** is made from the English word 'Innovate', which means - bringing novelty. The word 'Navachar' (Innovation) is made up of two words, 'Nav' (New) and 'Achar' (Conduct/Practice), in which 'Nav' means new or novel and 'Achar' means conduct or change. In this way, innovation is that change through which modification is brought to the previous state. "The meaning of innovation is not merely doing some new work, but doing any work in a new way is also innovation."

47

--- PAGE 47 ---

According to **E. M. Rogers**- "Innovation is an idea perceived by the individual as new."

According to **H. S. Bhola**- Innovation is an idea, an attitude, a mechanism rich in skill which is new and qualitatively different from the existing form.

Characteristics of Innovation in Education:

- 1) In this, such novel techniques are utilized so that the holistic development of the child can take place.
- 2) Through this, efforts are made to improve the present conditions.
- 3) Through educational innovations, educational technology is taken to schools.
- 4) Its relation is with novel technique and novel knowledge, which is utilized by the teacher in the teaching process.
- 5) Educational innovation mainly makes the teaching-learning process effective.

TEACH EXTRA & AEPS OFFICIAL

The need for educational innovation is as follows -

- 1) For social change, through this, the distance between student and teacher can be reduced. Students get an opportunity to rectify their mistakes by receiving feedback on the basis of their educational progress and achievement.

48

--- PAGE 48 ---

- 2) For making universal primary education accessible, educational innovation has an important role in making free primary education accessible to children of 6-14 years.
- 3) For economic development, it is extremely necessary to accelerate the pace of economic development in India. Its reasons are ignorance, unemployment, poverty, etc. To bring improvement in all these, there is a need for novel ideas, new programs, and novel dimensions.
- 4) For development of human resources, the elevation, development, and progress of any nation depend on its human resources.

Importance of Educational Innovation:

- 1) By utilizing innovations, dynamism is being brought to the process of teaching and learning.
- 2) The teacher diary also features the use of innovation, in which learning evaluation of students is done by writing indicators.
- 3) Innovation is also essential for students to recite thoughts, motivational instances, and main news at the prayer assembly place.
- 4) Innovation is essential for wall magazines, libraries, child newspaper publication, etc., in schools.

ACH EXTRA MEPS OFFICIAL

5) Innovation is essential to bring novelty to pre-established methods, programs, and traditions.

49

UNIT - 5 School and Education Policies -:

School (Vidyalaya) -

School refers to the combined form of the main building of the school, laboratory, library, hostel, sports ground, etc. Having a building for every school is extremely necessary.

- Main building or department building of the school
- Hostel building
- Library building
- Playground
- Laboratory

- Agricultural building
- Garden/Orchard

TEACHTRA & AEPS OFFICIAL

Characteristics of a good building:

- i) Sufficient space
- ii) Flexibility
- iii) Attractive
- iv) Equipped with facilities
- v) Peaceful environment
- vi) Accessible classroom arrangement

50

--- PAGE 50 ---

National Policy on Education (1968) :-

On the recommendation of the Kothari Commission, the Government of India declared the first National Policy on Education in the year 1968, whose points are as follows:-

- I. Arrangement for free and compulsory education should be made.
- II. Three-language formula should be followed.
- III. Work experience should be made an integral part of education.
- IV. Common school system should be started.
- V. Examination system should be made reliable and objective.

Sarva Shiksha Abhiyan :

Sarva Shiksha Abhiyan is known by the name of Education for All Campaign. The slogan "Sab Padhein Sab Badhein" (All Study, All Progress) was given in this campaign. Sarva Shiksha Abhiyan was started by the Government of India in 2000-01. Its beginning was made by Atal Bihari Vajpayee.

EXTRA EPS OFFICIAL

Kasturba Gandhi Balika Vidyalaya Yojana was started in August 2004, under which a scheme was made to give primary education to all girls. Later this scheme merged with Sarva Shiksha Abhiyan.

51

--- PAGE 51 ---

Goal Setting of Sarva Shiksha Abhiyan:

- i) Bringing all children to school by the year 2003 through school education guarantee centers, alternative schools.
- ii) Providing free and compulsory education to all children of 6 to 14 years by 2010.
- iii) Achieving the goal of universal education by 2010.
- iv) All children complete five years of primary schooling by 2001.

Mid-Day Meal (Madhyahn Bhojan) :

The beginning of the Mid-Day Meal first started from Tamil Nadu in India, whose objective was to make Sarva Shiksha Abhiyan successful. This scheme has been started keeping in mind that enrollment in primary classes should increase and the tendency to drop out of school should decrease, etc. On 15 August 1995, the National Programme of Nutritional Support to Primary Education (Mid-Day Meal) was started. Under this scheme, all children studying in government-aided primary schools across the country were given 3kg of wheat or rice per month on 80% attendance, the full benefit of which went to the child's family instead of the student. Therefore, on 1 Sep 2004, the scheme of providing cooked food in primary schools was started.

52

Under this scheme, arrangements were made to give students food items made from rice on four days of the week and food items made from wheat on two days of the week during recess in schools. The mid-day meal will be made available for at least 200 days in a year.

Types of Schools :-

In India, entire school education has been divided into four parts:-

- 1) Primary School
- 2) Upper Primary School
- 3) Secondary School
- 4) Senior Secondary School

EXTRA & AEPS OFFICIAL

1) Primary School : Primary schools are divided into two parts: schools in which education from class 1 to 5 is given are called lower primary schools, and schools in which education from class 6 to 8 is provided are called upper primary schools.

2) Secondary School - : Secondary schools are those schools in which education from class 9 to 12 is given. These schools are divided into two parts. Lower secondary schools provide education from class 9 to 10. Senior secondary schools provide education from class 11

53

to 12. The operation of these schools is carried out by various ministries of the state government and private institutions.

Construction of School Building :-

From the perspective of the holistic development of students, it is necessary to pay attention to the following facts in the construction of school buildings:-

- 1) Foundation** - The foundation has special importance in the construction of any building. Deep foundation should be dug and concrete should be laid in it so that the effect of water located in the ground does not fall on the walls.
- 2) Walls** - The walls of the building should be made of brick and stone. The width of the walls of a building should be at least 14 inches. If a large multi-story building is to be made, the width of the lower wall should be 18 inches.
- 3) Floor** - The floors of all classrooms of the school building should be strong and smooth so that cleaning can be done well.

4) Stories of the school - Rayburn has said, "The school building should be of a single story because this provides convenience to the principal in inspecting all the works of the school."

5) Size of the classroom :- The size of the classroom depends on the number of students, but still the size of the classroom should be large enough so that at least 40 students can sit comfortably.

54

--- PAGE 54 ---

6) Entrance doors :- There should be enough entrance doors in the building so that the school building can be emptied in 4 minutes. There should be at least two main entrance doors.

7) Light arrangement :- There should be a sufficient number of ventilators and windows in the school classrooms so that there is sufficient light in the classroom.

8) Arrangement of land and playground.

SOFFICIAL

9) Arrangement of cycle stand, drinking water, and canteen.

Curriculum (Pathyakram) :

The systematic and accessible presentation of prescribed subjects, sub-topics, and related material for any kind of education or training is called curriculum. Curriculum is an extremely important part of the educational process. Curriculum itself is the object that establishes a relationship between the teacher and the student. The medium of the process that goes on between the teacher and the student is curriculum. Through curriculum, it is determined what and how much is to be taught to the children. Curriculum also determines the work of the teacher, according to which he decides how much he has to study throughout the year and prepares himself accordingly.

55

--- PAGE 55 ---

Course of Study / Syllabus (Pathyacharya): -

Syllabus is a comprehensive term which includes a combination of internal and external activities of the school. Under this come all those experiences which the student acquires in school life, and it includes co-curricular activities organized inside and outside the classroom. While this is a school guide in which the curriculum is inherent.

Objectives of Syllabus :-

- i) Taking care of the diverse needs, abilities, perspectives, and interests of students.
- ii) Construction of a helpful learning environment where every child learns to be successful in life.

- iii) Making the child capable of facing courageous problems and solving them through appropriate methods.
- iv) Assisting in making students practically useful and good citizens for a democratic society.
- v) Every child achieves multi-faceted development.

EXTRA & AEPS OFFICIAL

Textbook (Pathyapustak) :-

This is a mirror of all the records coming under a curriculum, in which what and how much students have to read is reflected.

Need for a textbook :-

56

--- PAGE 56 ---

- I. In a textbook, organized knowledge of the subject according to the prescribed curriculum is found at one place.
- II. A textbook acts as a guide for teachers and students.
- III. Students get inspiration to acquire knowledge through self-study from textbooks.
- IV. A textbook acts as a guide for teachers and students.
- V. Classroom work and evaluation are possible on the basis of textbooks.

& AEPS OFFICIAL

Difference between Syllabus (Pathyacharya) and Curriculum (Pathyakram):-

Syllabus (Pathyacharya):-

- I. The scope of syllabus is extremely comprehensive, which is related to almost every aspect of a student's life.
- II. Under syllabus, there is an inclusion of the organization of all activities of the school, such as sports and physical training, cultural programs, celebration of festivals, NCC, and scouting, etc.
- III. Syllabus rejects the rote learning of facts and gives priority to the holistic development of the child.
- IV. The scope of syllabus is huge. This is the holistic development of the child. The nature of syllabus is based on situations, needs, and problems.

57

--- PAGE 57 ---

- V. Through syllabus, there is a possibility of social change and permanent change.

VI. The objectives of syllabus can be achieved by going into unlimited fields.

VII. Changes are carried out under school management according to the syllabus.

Curriculum (Pathyakram) :-

TRA & AEDS OFFICIAL

I. The scope of curriculum is narrow, which merely provides knowledge of about how much knowledge of different subjects has been acquired by children at various levels.

II. Under curriculum, only the topics of teaching subjects are included. Therefore, it is structured/defined.

III. In curriculum, succeeding in exams by encouraging the habit of rote learning is considered the main goal.

IV. While curriculum is merely a means to achieve this goal of syllabus.

V. The nature of curriculum is based on subject matter.

VI. Through curriculum, there is a possibility of change in immediate qualities.

VII. The objectives of curriculum are achieved by staying in the classroom or in limited areas.

58

--- PAGE 58 ---

VIII. According to the curriculum, even classroom changes are always not essential.

Evaluation (Mulyankan) -

Evaluation is an academic task or process in which the determination of the desirability of the results obtained from measurement is carried out. Evaluation is not only an essential part of the educational process, but it is also an important part of the life process. Through teaching action, the development of all three domains of the individual—cognitive, affective, and psychomotor—is carried out. Evaluation is a more comprehensive term. Evaluation is an extensive, purposeful, and continuously running process. "Evaluation is that process which tells to what extent the desired objectives have been achieved." Evaluation is considered an important part of the education process because it is found in all levels of the education process, formulation of objectives, teaching-learning process, curriculum planning, testing, etc. Evaluation is a comprehensive process under which the utility of subject matter is discovered.

According to **Remmers and Gage**- "Inside evaluation, what is excellent or desirable in the view of the individual or society or both, is taken for granted."

According to **Dandekar** -: "Evaluation tells us to what extent and which objectives have been achieved by the child."

59

The characteristics of evaluation are as follows:

- i) Evaluation is a comprehensive process.
 - ii) This is a continuously running process in which various kinds of efforts are made to know about the progress of the student.
 - iii) It presents the teaching-learning results both presentationally/test-wise and qualitatively.
 - iv) Evaluation is an integral and indispensable part of the teaching-learning and educational process.
 - v) Evaluation provides teachers an opportunity for measurement and improvement of their teaching system.
- CHEUTRALPS OFFICIAL
- vi) Evaluation takes a decision regarding the utility of learning experiences, under which how much the child has learned, how much he uses it in his future life, and how much its utility and significance are, is determined.

*** National Curriculum Framework (2005) -:**

NCF 2005 was constructed by NCERT and the work of completing it was done under the leadership of Director Prof. Krishna Kumar. Its main goal is "learning", meaning students are to be given opportunities for different experiences to achieve knowledge on their own.

According to this, every student should be provided an opportunity to express his different experiences. Its main objective is to reduce the distance between life and knowledge, and to link children's school life with their external life. NCF-2005 is a document to focus attention on these very topics of what and how to teach children. Education should be seen as a liberating process. The process of education should be freed from all kinds of exploitation and injustice, poverty, gender bias, etc.

Principles -:

- i) Linking knowledge with life outside the school.
 - ii) Freeing studies from the rote learning system.
 - iii) Ensuring that the syllabus/curriculum does not remain merely textbook-centric.
- TEACH EXTRA & AEPS OF
- iv) Connecting the classroom with activities and making it flexible.

The main objective of NCF 2005 was to reduce the distance between life and knowledge. The prominent formula of NCF 2005 is "Learning without burden", and that the process be "child-centered". Subject material should be

utilized in which an influential personality can be constructed. According to NCF - 2005, every personality has his own capacity and skills, so every student should be provided an opportunity to express them.

i) Perspective towards the teacher.

61

--- PAGE 61 ---

ii) Perspective towards children.

iii) Perspective towards language.

iv) Perspective towards mathematics.

BCF (2008) :- Bihar Curriculum Framework (2008)

This is a research/adaptation of the framework which has been carried out by Bihar to run the education of its own state separately and according to its own requirements. Under this, a slightly modified and separate curriculum was created for the state.
