8. Labour is compensated by physical exercise.

❖ Objectives of Physical Education ::

1. The main objective of this education is to develop the students in all aspects. Its main aim is to develop the mental and intellectual abilities of the students.
2. is a means of preparing students as helpful elements of the society , through which they can adjust with the society in future.
3. Through this education, students are taught the art and qualities of staying healthy. Because a healthy mind is created in a healthy body.
4. This education develops the emotional development of the students. It helps in controlling their emotional aspects.

5. This education is provided to develop the muscles of the students. With the help of which they remain continuously active.

❖ **Linkage of physical education with education and health:**

- Health is an essential input for a child's overall development and particularly affects enrolment , retention and completion of school. This subject area embraces a holistic definition of health , wherein physical education and yoga contribute to the physical , social , emotional and mental development of a child.
- It is very important to be physically and mentally healthy to do any work. If we are not physically and mentally healthy then it will also affect our education.
- Emotional health is the way a person thinks about himself and controls his emotions. To be emotionally healthy, a person should keep his emotions in the most positive way and develop the ability to control them and think about how to solve difficulties.
- Physical health means being physically fit and free from all diseases. It means that all the external and internal organs of the body are functioning properly.
- For good physical health, a person's size , balanced diet according to age and gender, deep sleep, physical activity, exercise, blood pressure and body weight tolerance etc. should be as per the same standards.
- A person is said to be cognitively healthy when he or she performs all mental processes efficiently and with ease. These processes include making new ideas, making appropriate decisions, and using language well to present one's point of view.

- No matter how physically healthy a person is, unless he is mentally healthy, his physical health will be affected.

❖ **Aims of Health Education**

1. To provide education related to health protection and physical development.
2. , causes , prevention and treatment measures of various physical diseases .
3. To create good habits in children so that they can protect their health.
4. To make aware about health related rules and programmes.
5. To disseminate and propagate school health services in the society for community health.
6. To make aware of the principles of first aid.

❖ **Role of the Principal in Health and Education**

- The headmaster plays an important role in arranging health education in the school. The headmaster can do the following tasks towards making proper arrangements for health education in the school -
 1. Starting health education programs.
 2. To make proper arrangements for health-education programmes.
 3. To establish coordination in various activities related to health education.
 4. To arrange for health check-up of students.

 6. Providing appropriate material for health education
 7. To obtain the cooperation of parents in health education programmes.

8. Providing community resources to make health education programs successful.
9. To arrange for health examiner , physical education teacher , nurse , doctor , etc.

❖ The role of teachers in health education

- In relation to health education, the teachers have to do the following tasks -
 1. To make the students aware of the health rules for health protection.
 2. To generate interest of students in health related subjects.
 3. To arrange health related activities.
 4. To arrange for health check-up of students.
 5. To inspect the body hygiene of students from time to time.
 6. Motivating students to participate in health activities
 7. To arrange nutritious mid day meals for the students.
 8. To help in the control of infectious diseases.
 9. Maintaining data related to the health of students.

❖ Physical Roma Ha Inclusive Form for Elementary Class Children

- is very important for primary classes . Only through physical education, children 's skills and attitudes are developed properly. Physical education plays an important role in the all-round development of students.
- Through physical education, children are made to do different physical activities like running , climbing , throwing , jumping rope etc.
- come from different castes , religions , sects , everyone has different abilities and capacities. You will see children with special needs in the classroom.

- Therefore, physical education should be given to every child keeping in mind his/her abilities and needs so that the children can face their difficulties easily and acquire education.

Unit -02 Games and Sports

- ❖ **game :-** game This word itself is a kind of pleasure. All those tasks which we do with interest and freely and which give us pleasure are called Anand (pleasure). It is called a game.
- Games are something that we play as per our choice in our free time. This is an activity that is independent, aimless and enjoyable in itself.
- ❖ **Definition of game by psychologists: -**
- ❖ **According to Gulick →** Play is something that we do with our own will
- ❖ **According to Caldwell Cook:-** "Play is considered an important means of education
- ❖ **game features**
 1. Sports is enjoyable.
 2. it would be free
 3. Sports is important in real life.
 4. Play is self-motivated and self-directed.
 5. In sports the process is important and not the result .
 6. Games are imaginative and creative.
 7. Children become playful through games.
 8. Children become energetic through play.
 9. They are a source of inspiration for children.

❖ Importance of games and sports: -

1. Games help in the rapid development of the brain and intellect.
2. Sports keeps a person stress free.
3. Games help in concentrating on studies.
4. The body's muscles become stronger through sports.
5. Sports makes a person feel energetic.
6. Developing students' basic skills through play
7. Children's emotional development happens through play.

❖ Basics of sports:-

- Sports is beneficial for the all-round development of children, its basic foundations are as follows-
 1. Anand (for fun)
 2. Safety (safe environment , physical and emotional safety)
 3. Participation of all (inclusion of boys , girls , children with special needs)
 4. Learning by doing (children figuring out the rules of games on their own , making them up , etc.)

❖ Different Types of Games

- ❖ **Indoor games-** Indoor games are played at home or in the courtyard. Our mental development happens rapidly due to these games. Cards, Ludo, Carrom , Snake etc. are played in indoor games.
- ❖ **Outdoor games -** In outdoor games, play games like cricket , football , hockey , badminton , tennis , volleyball etc. These games are beneficial for physical development. These games keep our body fit and healthy and these games are played outside the house in large grounds .
- ❖ **Creative games :** - This game includes making clay toys, making wooden houses, etc. Imagination develops through this.

- ❖ **Imaginative play** :- Acting in any way like acting as a leader, acting as an actor etc. This game also develops imagination.
- ❖ **Ruled games**:- Any kind of game which is played according to a rule. Such as:- Cricket , Kabaddi , Hockey etc. Emotional development happens due to rule-based games.
- ❖ **Creative games** : Through this type of games, ideas about some new things are developed.
- ❖ **Inventive game** - discovering new games for the sake of one's own enjoyment or for the sake of it, with rules made up by oneself.

❖ **The following types of development take place in children through games :-**

1. Physical development takes place through play.
2. Children develop mentally and intellectually.
3. Playing with everyone leads to social development.
4. Moral development takes place.
5. Education also develops through sports.

❖ **Factors influencing the development of the sport**

1. **Health**: Children who have good physical health are more active and intelligent in every way.
2. **Gender**:- After a certain age i.e. after childhood, generally the games of boys and girls become different , which affects their interests.
3. **Age**- In childhood, all children like to play together and play around their house, but after a certain age, they like to play with their group and discrimination starts emerging among them .
4. **Environment**:- It is essential to have sufficient space for playing , because playing in the open field is essential for physical development so that children develop properly.

5. Time- there is a proper time for playing , children cannot play at any time , that is, their daily routine should also be in accordance with this so that the child can develop properly.

6. Sports Material: The type of resources available determines the type of games played by children . That is , it is important to have sports material so that children can play well.

❖ **Miscellaneous children's games**

1. **Experimental Games-** Children are little scientists , they discover and experiment with new types of games according to their own understanding. These are called experimental games.

6. Imaginative play: - This type of game in which children play using imagination , like playing with dolls etc.

7. Group games - Playing in a group which develops a sense of participation. For example:- Cricket, football etc.

❖ **Concept of Games and Sports**

➤ , you are closest to self-realization , similarly, when a player reaches the pinnacle of sports, he realizes that he was playing not for fame , money or personal security , but for some pride which can never be achieved through money or fame.

❖ **From a psychological point of view-**

➤ Play is an inner desire that changes our behavior and leads us to physical activities that help in our growth and development.

➤ There is no need to prepare or encourage a person for sports , but he participates in it according to his inner desire, this gives happiness and satisfaction to the human being.

➤ **According to Nick Millson** - Any activity which is done happily in spare time and which creates interest in life is called a sport.

❖ **Importance of Games and Sports :**

1. Children develop holistically through sports and games
2. By participating in sports the body remains healthy.
3. Just as much as studies are important in life, sports are also as important.
4. When a child takes interest in playing, his digestive power increases and he also feels hungry.
5. If children remain happy and healthy, they will concentrate on their studies also.

6. The body works very hard during sports. As a result, a large amount of oxygen enters the body.
7. By participating in Kholi, the body remains healthy and our mind gets relieved of stress.
8. Sports give peace to the body and mind.
9. Games develop social skills

8. Ashtangayoga

Prathanam and Basic Asanas

❖ **Meaning of Pranayama** regulating one's own vitality

- Prana passes through thousands of subtle energy glands (called nadis) and energy centers (called chakras) in the body. The quantity and quality of prana determines a person's mental state. If the prana is strong and its flow is continuous and steady, the mind remains happy , calm and full of enthusiasm. But due to lack of knowledge and not paying attention to breathing, the human being's mind can create obstruction in the flow of prana. Such a situation gives rise to fears , worries and fears in the mind. Every problem first originates in the subtle energy. Therefore, any disease first originates in the prana energy.
- With Pranayam both the body and mind become healthy and pure.
- As soon as the body is released, the person is declared dead.

❖ **benefits of pranayama** ,

1. Increases the quantity and quality of life force.

2. Prana opens up the blocked nadiya and chakras. Your agma mandala expands.
3. Makes a person powerful and enthusiastic.
4. Cleanliness comes to the mind and good health to the body.
5. There is harmony between body , mind and soul.
6. This provides adequate oxygen to the lungs.

❖ **Posture:** The word 'asana ' is derived from the Sanskrit word ' as ' which has two meanings - the first is the sitting position and the second is the physical position.

- the mind stable and gives happiness is called asana.
- Asana is a position of the body. When we can remain comfortably in one position of the body for a long period without any strain or any physical pain, that position is called asana.
- The definition of asana in the Yoga Sutras is 'Sthira Sukha Asanam ' .
- According to tradition in yoga scriptures, there are 84 lakh asanas, i.e. there are as many types of asanas as there are living creatures on earth. But no one knows all the 84 lakh asanas, therefore only 84 asanas are considered to be the main ones.

❖ **Types of postures**

Unit – 4 Understanding Health Education and the School Context

- ❖ **health education :-** Health education is education that helps to identify health needs and suggests appropriate behaviors to match these needs.
 - In simple words, providing information to people regarding health and diseases , making efforts to improve their health , creating opportunities for them to gain control over diseases, etc.
 - Health education is the process by which the body can be made healthy. It develops good health habits. And information is obtained to avoid infection of diseases.
 - The progress of any country depends on how healthy its citizens are.
 - Knowledge of health education is necessary for personality development and upliftment of the society. Educating students about all the aspects of health is called health education.
- ❖ **Objectives of health education**
 1. Explain the importance of keeping one's surroundings clean.
 2. To create awareness about the social environment.
 3. To provide health related knowledge to the students.
 4. Organizing special health programs for students.
 5. Providing information about all types of diseases and defects and their prevention
 6. To develop interest and attitudes towards good health among students.
 7. Checking the health of each student and understanding their health needs

❖ **Importance of health education:**

1. Health education is important because it develops attitudes towards the importance of good health and safe customs and habits in the family and society.
2. develop hygienic habits
3. To educate and expose students to health related information and areas of interest , thus enabling them to better understand and deal with personal and societal health problems .
4. The general public is provided with deep knowledge regarding the nature of social life and family life.
5. By instructing the general public to take care of family control, it develops a sense of responsibility and mutual cooperation in them.

❖ **Understanding of nutrition and balanced diet or size: -**

❖ **Diet :** - The food item consumed by humans which nourishes the human body is called diet.

- Diet is also called the food intake of a person, that is, the amount of food a person consumes at one time when he is hungry , is called the diet of that person .
- is necessary for survival, maintenance of health, unity of social and family members, emotional activity , affection , love etc.
- Diet is very important for the balance of a person's physical , mental, emotional and social abilities.

❖ **The purpose of the diet**

1. to strengthen the physical body

Unit- 05 Health Education and Physical Environment of School

- The physical environment of the school is related to the overall welfare of the school which not only includes the safety and cleanliness of the place but also includes study , sports and student-teacher relationship.
- School environment means school class rooms , buildings , neighbourhood, playgrounds , seating arrangements , adequate air and fresh drinking water , programmes and time-tables and favourable working conditions.
- The school environment helps in the social and emotional adjustment of children. It stimulates their learning process and enhances and protects their health.
- This includes the arrangement of school's condition , school building , playground , educational equipment , drinking water , toilet furnishings , and furniture etc. For this, special

attention should be paid to suitable place , land and environment etc.

❖ **Personal hygiene and cleanliness**

- Personal hygiene is very important in every person's life. If good habits related to cleanliness and hygiene are taught in a playful way in childhood , then the child always remembers them and also follows them regularly , because the first five to six years of life are the basic years for learning habits.
- includes keeping your entire body healthy , hygiene of hands , hygiene of nails, hygiene of hair, hygiene of clothes etc.

❖ **Important points for personal hygiene**

1. For personal hygiene, a person should pay attention to pure water , pure air, balanced diet , etc.
2. One must pay attention to his body and always stay clean
3. For hygiene, a person should keep his skin , hair , nails, mouth, teeth, tongue , eyes , ears , nose etc. clean regularly so that he can avoid diseases.
4. A person must exercise to stay healthy and keep clean to avoid any kind of disease.

❖ **Singh-Day-Mill in School**

- ❖ Mid Day Meal Scheme is a scheme run by the Central Government through which nutritious food is given to the young children studying in the schools.
- ❖ This scheme has been running in our country for many years and this scheme is run in government schools of every state.
- ❖ Mid-day meal is a scheme of the Government of India under which free lunch is provided to the students in primary and secondary schools across the country.

- ❖ It is important to increase enrolment, improve retention and attendance, and improve child nutrition.
- ❖ Most of the children come to school on empty stomach and by afternoon they get hungry , after which they feel bored and run away from school. Due to which school attendance reduces. Keeping all this in mind, 15 Aug 1995-MD was started. MI-DAY Mill

❖ **Objectives of Mid-Day Meal**

- ❖ Providing health benefits to students through nutritious food
- ❖ Increasing enrolment and improving attendance
- ❖ Children should develop better.
- ❖ As many children as possible come to school
- ❖ keeping children back from getting education
- ❖ Eating together without any discrimination creates a feeling of brotherhood and eliminates caste discrimination
- ❖ Mid- d- Meal Scheme is a well-designed program that aims to provide at least one nutritionally adequate meal every day to underprivileged children

❖ **Features of Mid-Day Meal:**

1. The aim of the mid-day meal scheme is to provide nutritious food to children so that they can grow well
2. , the calorie content in the food given to every child from class one to five should be 450 GM and protein should be up to 12 G.

❖ **health records / medical records**

1. In medical records , a record of any child/person's name , date of birth , medical tests, treatment, medicines and comments made by the doctor about the health is kept.

2. Health records mean the collection of health related information of students. Which contains information about the physical capacity , average weight , blood group etc. of the students.
3. School health records include students' medical histories, physical exams, screening results, and emergency information.
4. Health records are maintained during the student's education period. When the child is transferred to another place , the records are handed over to

❖ Objectives of Health Records

1. To have real information about the health of students .
2. To do medical research. -
3. In case of any serious injury, this is how help can be provided in its treatment
4. For paramedical or dental education.
5. To identify students suffering from malnutrition or illness

❖ HEALTH CARD

- Under this, you will get a digital card with which you can get your treatment done from any corner of the country.
- This healthcare facility has been started for every Indian. Under this digital health mission, you will be given a Health ID Card (PM Modi Health ID card). Using which you can get your treatment done from any part of the country.
- Health card is made at school level to protect students from diseases and for their vaccination. On this basis, facilities of vaccines, tests and medicines are provided to students from time to time to protect them from diseases.

❖ Organizing health awareness programs in schools

- 1. Organizing health awareness programs in schools to make children aware about health**
- 2. To develop a positive attitude towards health education**
- 3. By being conscious about health, we can avoid passions.**
- 4. Two teachers in each school will be nominated as Health and Wellness Ambassadors. They will be trained to promote healthy behaviour and prevent diseases. Health and Wellness Ambassadors will conduct one hour a week sessions through interesting activities.**

THANK YOU SO MUCH
