S – 2 Cognition , Learning and Child Development

Unit- 1 : Cognitive and Concept Development in Children

Point -1 Understanding cognitive development (context of children)

❖ cognitive Cognitive Development

- **cognitive Development From intention Is Boy Development of mental ability , which includes intelligence , consciousness , thinking and problem solving ability. And its development starts from infancy.**
- **Cognitive development is a developmental process through which a child wise man And he becomes a smart person.**
- **To develop all those mental abilities and capacities of the child which result in So he can adjust to his changing environment and solve even the most difficult and serious problems .**

❖ Jean The Piazza Of According cognitive

- **Development Beliefs According to Jean Piaget Simulation of instead Search But It is based on the knowledge of the person. In this, the person is based on the knowledge of his senses. With the help of this, the child builds his/her understanding based on direct experience.**
- **Examples A small child gets jealous When he touches the lamp he feels burning**

❖ cognitive Development of Speciality :

- 1. cognitive Development In Mental , imagination , language , thinking, memory development , reasoning , problem solving etc. are included.**
- 2. Cognitive development refers to mental development.**
- 3. Cognitive development is an individual process that moves from the general to the specific.**

4. Cognition is an acquired ability that continues throughout life and helps us adjust to the environment.
5. Development and maturation of the senses are necessary for cognitive confidence.
6. Through this the learning capacity of humans increases.
7. It is through cognition that a human sees , understands and experiences and acquires the relevant knowledge.
8. Its development begins even before infancy.
9. According to this theory, the power of thinking and exploration in children depends on their biological maturity, experience and the interaction between the two.

❖ **cognitive Development process of the ladder ::**

- cognitive Development Six steps of the process are.

1. Meditation
2. retention
3. memory
4. language
5. Learning
6. Higher logic

❖ **Cognizance (Cognition) -** Cognition is a collective name for some important mental processes. These include attention , memory, decision making , language proficiency and problem solving.

- Sensory inputs Accepting it and using it appropriately is called cognition and understanding
- The study of cognition is important to psychology , philosophy , linguistics , computer science, and many other branches of science.

❖ **Hilgard Of According : -** a person himself Cognition is when we have acquired thoughts , knowledge , interpretation, understanding and perception about ourselves and our environment .

❖ **Education In Cognizance of Role**

1. Only through cognition can a person express his feelings to everyone's understanding.
2. Cognition also plays an important role in acquiring education and teaching.
3. gain knowledge about the environment around us .
4. Cognition plays an important role in attaining education from primary to higher education.
5. We achieve intellectual development only through cognition. Teaching is not possible without intellectual development.

❖ **Cognizance And learning To Affected to ones The social and cultural factors are as follows:-**

➤ Family , social and economic status , health , parental education , school , society , teacher-student relationship , environment

1. **Family:-** The peaceful and pleasant environment of the family accelerates the mental development of the child. If the child's family is happy , educated and civilized, then the child's mental ability will also develop smoothly.

2. **Socio-economic status:-** Due to economic status, the child is not able to acquire cognition properly. A rich child acquires more cognition than a poor child. The reason for this is the availability of resources available to the child.

4. **Health:-** If the child's health is not good then it directly affects the child's mental development and learning process.

5. **Education of parents:-** If the parents are educated then the cognitive development of the child will take place well .

School:- If the school environment is appropriate and the teaching system is student-centric, it will have a good effect on the cognitive development of children.

7. **Society:-** Where the child lives, if his environment is good , the people around him are civilized , then the cognitive development of the child will be positive.

8. **Teacher-student relationship:-** The child has a good relationship with his teacher. But the child will learn well and easily .

❖ **Jean The Piazza Of cognitive Development Of Theory**

- Jean Piaget Switzerland Of One Psychologist To know how intelligence develops in children , he made his own children the subject of his research.
- As the children grew up, he kept studying their mental development activities very closely. As a result of this study , the ideas he propounded are known as Piaget's theory of mental or cognitive development.
- Piaget put forward the point under this theory that the development of intelligence in children is connected with their birth. Every child is born with some innate tendencies and abilities to perform instinctive actions ; such as sucking , seeing , holding objects , reaching objects, etc.
- Therefore, at the time of birth, the child has the ability to perform similar activities in the form of intellectual structure , but as he grows up, the scope of those intellectual activities increases and he becomes intelligent. Piaget has divided cognitive development into 4 parts.

❖ The Piaget Of cognitive Development 4 important points Stages

1. Sensorimotor stage [from birth to 2 years]
2. Pre -operational stage [2 to 6 years]
3. Concrete operational stage [6 to 11 years]
4. Abstract/Formal Operational Stage [11 years onwards]

❖ cognitive Development of Process And structure

1. **Scheme :-** a behavior of any person or thing (A single information)
2. **Schemes :-** Organized patterns of behavior that can be easily repeated. solutions made by the child to the problem. Piaget is the expressed form.
3. **Scheme :-** Definition of scheme: The things which are already stored in the mind of a child and when the child forms an opinion about a subject matter by using the things already present in the mind, then it is called scheme .

❖ The Piaget by cognitive Development of Process In mainly Two Talk To Important Aspects . -

1. Organization
2. Customization

- ❖ **Organization :-** Organization From Meaning it Is That manifestation And intellectual Notifications To This Type systematic Did go So that adjustments can be made to the external environment.

- ❖ **Customization (Adaptation)** - environment Of with harmony to To inborn tendency
 - Customization He Process In which the child tries to adjust with his external environment.
- 1. **assimilation Assimilation** is One New object Or Of event present Experiences In Inclusive to of It is a process. EX:- Like giving a toffee to a child and putting it in his mouth because he knows that this thing is edible .
- 2. **Adjustment Accommodation-** adjustment it Process in which the child gets new experiences To Old of experiences Base But bring about improvement of Effort What does a Is.
- ❖ **Equilibrium** - This is the process by which a balance is established between assimilation and adjustment !
- ❖ **Cognitive Structure:** Sets by mental abilities. Sets by groups It is called cognitive structure.
- ❖ **Protection:** - Change and stability in the environment It is due to the ability to recognize and understand both and the ability to differentiate between changes in the form and colour of an object.
- ❖ **Classification :** - The ability to classify any characteristic based on color , shape , and size.
- ❖ **Serialization :** - Ability to rank objects according to their properties . Such as weight , length , etc.
- ❖ **cognitive Development Of Principle**
 1. Jean The Piazza was a psychologist from Switzerland
 2. He called children active constructors of knowledge.
 3. He also called the children little scientists.
 4. Piaget has divided cognitive development into 4 stages
 5. According to Piaget, development is a discrete process

Customization – Adapting oneself to the environment is called adaptation

assimilation – Linking new knowledge to prior knowledge

Adjustment - modifying and adapting prior knowledge

Schema – The things which are already stored in the mind and using them to form a concept about a subject is called a scheme

❖ **Jean The Piaget Development of Four stages Tell me**

1. 1. Sensorimotor stage 0-2 years
2. Pre-operational stage 2-6 years
3. Concrete operational stage: 6-11 years
4. Formal operational stage: 11-18 years

❖ **Sensory Pediatric stage 0-2 years**

1. This is the first stage of cognitive development.
2. This stage lasts from birth to 2 years.
3. At this stage, the child develops an understanding of the world through his senses
4. In this stage the child performs only simple actions.
5. In this stage, the child experiences objects , sounds , etc. with the help of senses.
6. This stage Of Balco In The senses Of Experiences And Wool But muscular Work by Understanding advanced yes Caste Is.

❖ **East operational Stage 2-6 years**

1. This is the second stage of cognitive development.
2. This stage lasts from 2 years to 7 years.
3. At this stage the child starts imagining.
4. In this stage the child learns through play and imitation.
5. At this stage the child starts learning language.

6. This stage In Child To It seems Is That As I thinks Am like that only Complete World would have been Is
7. centralization Of The fold comes
8. Apaltav fold No comes Is
9. living being Inanimate Of Understanding No Would Is This stage In
10. orderliness Or Protection Etcetera Of Gun No Would Is

❖ **Tangible operational Age 6 -11 years**

1. This is the third stage of cognitive development.
2. This stage is from 7 to 11 years .
3. In this stage the ability of reasoning starts developing.
4. This age In Boy contemplation to It seems Is.
5. This stage In Children Front laid Hui things To see only Some? Tax Can Is Or For them marked to do Start Tax gives Is
6. This stage In Children In Objects Of Classification Of Property Come go Is
7. Objects Of Protection Objects Of Property , Apaltav Of Property
8. Animism Of Property ,items One gets knowledge of decorating things in an order etc.

❖ **formal operational Age 11 - 15 years**

1. This is the fourth and final stage of cognitive development. (Its stage is considered to be from 11 onwards.)
2. At this stage the child has the ability to understand inconsistencies.
3. The child starts making hypotheses about events and also tries to verify them.
4. At this age the child starts solving problems.
5. At this stage the child's brain starts maturing.

6. This stage In Child abstract contemplation to It seems Is Or No Concept To understand It seems Is And Rules Of Above Work to It seems Is
7. What stage In Children Who Is Formula To They start to type and at the same time work on problem solving and diagnostic thinking

❖ **The Piazza Of Theory of features :-**

1. Learning to learn according to Piaget Environment and action are required.
2. Learning is a gradual and ascending process.
3. The power of thinking and discovery in children is dependent on their biological maturity, experience and It is resolved by the interaction of the two.
4. The abstract thinking of children is also at a low level and higher if his education is low So , if education is high then thinking is also high remains.
5. After formal operationalization, the child's entire intellectual power develops and he becomes capable of solving problems in a systematic and detailed manner.

❖ **Educational utility of Pia J's theory**

- The Piazza Of Principle In Learner That is Boy Active Role In stays Is ,
- While preparing the syllabus, teachers should keep in mind the needs and interests of the learners.
- Teachers should try to remove the defects of vitalism and self-centeredness that arise in the thinking of children.
- According to Piaget, in the concrete operational stage, children develop cognitive abilities in conservation relations , classification , etc.

- Teachers should conduct activities to enhance the development of these intellectual levels so that creativity, inventive and critical qualities can develop in children.
- Imitation and games have educational importance , we should present role models so that children can imitate and cognitive development can take place in children through various games.

❖ **Intelligence**

1. nature of intelligence
2. Characteristics of intelligence
3. Development of intelligence
4. intelligence determines you
5. Types of intelligence
6. Theories of intelligence
7. Howard Gardner's theory

❖ **Intelligence =** The word intelligence is generally used to refer to knowledge It is used in the sense of talent , knowledge and understanding etc.

- helps in understanding things and facts , finding mutual relations between them and gaining logical knowledge.
- Intelligence enables us to solve problems and achieve goals.

❖ **Psychologists By Intelligence Definition of**

1. **L.M. Terman -** " Intelligence " abstract Thoughts Of Reference In to think of Ability Is
2. **Ryurban -** ' Intelligence is the power that gives us the ability to solve problems and achieve goals.
3. **Woodworth and Woodrow** - Intelligence is a method of acquiring knowledge .

❖ **Intelligence Forest Form**

1. Learnability
2. Problem solving abilities
3. abstract thinking ability
4. Ability to adapt to the environment

❖ **Intelligence of features :**

1. Intelligence is an innate power.
2. Creating an environment for the proper development of intelligence It is important.
3. Increase in innate intelligence through Yogic practices It is possible.
4. Intelligence is the ability to learn.
5. Intelligence is the ability for abstract thinking.
6. knowledge and prior knowledge derived from wisdom and experiences Knowledge is the ability to benefit.
7. There is a difference between intelligence and knowledge.
8. Intelligence is influenced by heredity and environment.
9. Development of intelligence occurs from birth to mid-adolescence.
10. Intelligence is the ability to solve problems.
11. Intelligence is the ability to adjust to the environment.
12. Intelligence is a developing and changing ability.

❖ **Intelligence Of Development**

1. Development of intelligence during infancy (3 to 5 years) – rapid pace
2. Development of intelligence in childhood - 75% of intelligence development
3. The development of intelligence in adolescence is called maturity.

❖ **Intelligence Of Determinants of intelligences**

1. heredity
2. Environment
3. gender
4. Health
5. age

❖ **Intelligence Of Type**

1. abstract intelligence
2. Social Intelligence
3. Motor or mechanical intelligence

❖ **abstract Intelligence** - This intelligence gives us knowledge of subtle emotions. Artists , writers , painters etc. express their emotions through this intelligence.

- In this type of intelligence, words , numbers and symbols are used more .
- This is the process of learning reading. It is also the process of solving problems in which words and symbols are used. Therefore, the art of expressing one's thoughts through words and symbols is the result of abstract or verbal intelligence.
- school subjects like reading , mathematics , geography , history and so on, it is necessary to develop abstract intelligence. New plans, new inventions and new thoughts are made with the help of this intelligence.

❖ **Social Intelligence** , This intelligence is related to the ability of social adaptation with the help of which a person organizes himself according to the society. Due to social intelligence ; a person influences others with his behavior.

- This type of person is happy , sociable and takes interest in social work.

- It is because of social intelligence that a person lives a successful life in society. People with this type of intelligence are businessmen , diplomats , and social workers.

❖ **Gamak Or Mechanical Intelligence** , Mechanical Intelligence refers to the power or ability with the help of which a person adjusts himself well with the circumstances related to machines or physical objects.

- Children who have this ability start showing it from an early age. They try to repair their toys , watches or bicycles by opening them. Such children later become skilled artisans, mechanics , engineers etc.
- People with mechanical intelligence are also skilled in sports and other physical activities

❖ **Intelligence Of Theories of Intelligence**

1. An authoritative theory
2. the theory of two elements
3. trikhanda theory
4. pluralism or non-existence theory
5. Kelly Yerston 's theory of multiple mental abilities
6. Class component or federal theory
7. principle of order of importance
8. Cattell's theory
9. Guilford's inclusion theory
10. Gardner's theory of multiple intelligences

❖ **Intelligence Goal Distribution**

limitations of intelligence

Social class

1. More than 130 , brilliant (Genius)
2. 121-130 – superior intelligence

3. 111-120 – Sharp Intelligence (Above Average)
4. 91-110 - Average
5. 81-90 - Feeble minded
6. 71-80 - Low intelligence (DU)
7. Less than 71 - Idiot

❖ **Intelligence Of Measurement (Intelligence Quotient)**

- The term intelligence quotient was first used by Turman
- **Intelligence Quotient = MA (mental age) / CA (actual age)**

❖ **Howard Gardner Of Multiple intelligences Theory**

❖ **Gardner's theory of Multiple Intelligences**

- Gardner Of it Theory It is known as the theory of multiple intelligences . He propounded this theory in 1983 .
- In propounding this theory, Gardner stated that Emphasized that intelligence Of Form isolated No through Multifactor Would Is And Each intelligence is different from the other.
- Each knowledge/intelligence is independent of each other.
- Different types of intelligence have a tendency to interact with each other.
- Every person has extraordinary abilities.
- Gardner by told That General Intelligence In Eight Kind of Abilities or intelligence are included. These eight types of intelligence described by Gardner are as follows:-
- **Linguistic intelligence , logical mathematical intelligence , spatial intelligence , physical kinetic intelligence , musical intelligence , differential interpersonal intelligence, differential intelligence , personality intelligence , natural intelligence**

- ❖ **Linguistic Intelligence , Linguistic intelligence** includes the ability to understand sentences and words , vocabulary , the

ability to recognize conjunctions between sequences of words, etc.

- ❖ **Logical - mathematical intelligence** = This intelligence includes the ability to reason , the ability to solve mathematical problems , the ability to recognize the relationship inherent in the sequence of numbers , the ability to make analogies, etc. Such intelligence is found in mathematicians , detectives and scientists , etc.
- ❖ **Spatial Intelligence** = Ability to mentally change spatial images and ability to have spatial imagination etc. This type of intelligence is called " ART Smart " It was called "picture smart" .
- ❖ **bodily kinesthetic intelligence** = Such intelligence includes the ability to control physical movement and the ability to move and use objects carefully and skillfully. This is called 'body smart' .
- ❖ **musical intelligence** = Musical intelligence includes the ability to correctly combine pitch and rhythm. This type of intelligence includes the ability to recognize rhythm , melody and beat .
- ❖ **Interpersonal intelligence** = This type of knowledge is often used in social behavior.
- ❖ **interpersonal intelligence** = This type of intelligence is used for self-awareness , recognition , and understanding one's own emotions and skills. I want to know.

❖ **natural intelligence and natural** = This type of knowledge is related to the plant kingdom , trees, plants , animals or animal groups or evaluating the natural beauty etc.

❖ **concept Concept development**

- Children In concept Development Of Reference In Agreed go Is That First Among these Tangible operational As Parents Etcetera advanced would have Is And after Abstract concepts like happiness , sadness etc. develop.
- occurs from simple to complex , from concrete to abstract.
- A concept is a notion that is generally and universally related to a species , object or group.
For example: - Human does not mean one person or individual but the entire human race.

❖ **concept of Speciality** ,

1. learning of Process Of Base Is.
2. Learning is the process of simplifying a general idea that expresses a common idea.
3. Gives meaning to an idea obtained through imagination or perception.
4. Concepts depend on individual differences , which depend on the human's ability to think , analyze and generalize.
5. Concepts are vague in the beginning , but Knowledge becomes clear through experience.

❖ **concept Of Type**

1. connective concept
2. disjunctive concept
3. Relational concept

- ❖ **coordinator Concept :-** They All Suffix those which settle in the mind quickly , The connective is called a suffix . Like: cow , dog , cat etc.
- ❖ **Disjunctive Concept:** Those concepts whose values and characteristics are used in place of each other. For example:- two triangles , two rectangles etc.
- ❖ **Relational Concept:** Under this, those concepts come which have a definite relationship between their characteristics and values.
- ❖ **Lads In concept Of Development :**
 - Children those Of About In To all First Explaining It is what they see , what is in front of their eyes . That is, concrete concepts develop first in children.
 - As the child grows older , he develops concepts about abstract things as well and starts talking about them.
- ❖ **Balco In advanced being ones suffix**
 1. colour = identification of colour , difference , name
 2. Locational = distance , direction , height , length the depth , size ,
 3. Shape = identification of shape , difference
 4. Time = initially afternoon , night , evening but Gradually the knowledge of time.
 5. Number = school after 5 years
- ❖ **Suffixes to the Impressed to do The ones aspect**
 1. Vedic ability
 2. The senses of perception
 3. Learning of the chance
 4. gender
 5. Experience
 6. Ripeness

- 7. Reflection
- 8. Information reimbursement
- 9. Socioeconomic status

❖ **Brunner Of cognitive Development Theory**

- **Jerome Bruner One American Psychologist He gave a new theory on cognitive development which is found as an alternative to the cognitive development theory of Jean Piaget.**
- **Bruner's model of cognitive development was presented. According to him, this is the model through which a human being establishes harmony with his environment.**
- **Bruner's study of cognitive development was first done on adults , then on school-going children , then on 3- year-old children and then on newborns.**
- **Bruner mainly emphasized on how the child mentally expresses his feelings and how he thinks during infancy and childhood. He believed that the child mentally expresses his feelings in the following three ways.**

❖ **Brunner Of cognitive Development of Three Stages**

1. **Enactive stage - (birth to 18 months)**
2. **Scene statue Iconic stage - (18 to 24 months)**
3. **Symbolic stage (from 7 years onwards)**

❖ **activism Method (period from birth to 18 months)**

- **This Method In baby Own Experiences To Word in Actions Of Channel From Express does Is. As hunger to seem But Hand Feet Shake cry Etcetera**

❖ **Scene statue Method From (18 -24 months)**

- This Method In Boy Own Feelings To Our Mind From Some? Scene Paradigm By making It is expressed . In this stage, one learns the most from perception.

❖ **symbolic Law (7 Years From Ahead)**

- This Method In Boy Own Experiences To Sound relative of signs (language) Channel From Express does Is. And This stage In Children In Symbolism To Their The ability to relate basic ideas begins to develop.

❖ **Contribution of Bunner's theory to education:**

1. teaching methods according to the mental ability of the child .
2. Appropriate intellectual development of children can be achieved by making necessary amendments in the planning, implementation and evaluation process of the teaching plan as per the level of the children.
3. Designing curriculum according to mental level.
4. In making teaching plan based on the knowledge before starting new topics

❖ **Brunner Of Principle of Properties**

1. emphasizes on creating a favorable environment for coordinating the previous experiences of the masters with the new subjects .
2. This theory emphasizes on reinforcement in learning.
3. This theory believes that the subject matter should be structured in such a way that children can learn it easily
4. According to this theory, education develops both personal and social qualities in the child.

Unit -2 : Children Development And Learn

❖ Hair Development And learning In Interrelationship : Introductory Understanding , Maturation and Learning

❖ Development - Development is a life It is an ongoing process that starts from birth It continues till death.

- Development Only physical Growth of Side only Signal No does Rather Its under It includes physical , motor , cognitive , emotional and social changes.
- Not all development continues until death, such as physical growth stops at the onset of adulthood.
- Development is a continuous process but its speed keeps changing at different age levels

❖ human Development of Stages

1. Pregnancy - before birth to 6 years of age
2. Infancy - from birth to 6 years
3. Childhood - from 6 to 11 years
4. Adolescence - 11 to 18 Year till
5. Adulthood - from age 18 to death
- 6.

❖ Development of Lower Features To tell Can Are -

1. it Birth From taking Death till Walking wala Process Is.
2. Development also includes growth.
3. The changes that occur during development can be experienced but cannot be measured.
4. Development involves changes in all aspects collectively.
5. This is a universal process.
6. Development is a series of gradual changes. There is continuity in the changes. These changes take place at a continuous pace. Development is not normal at any stage of development.

7. Successive changes are related to each other in some way or the other. The next change is based on the previous change.
8. In a creature, development happens first and growth comes later.
9. The changes that occur in the process of development are both constructive and destructive.
10. It not only points towards physical changes but also includes physical , mental , social and emotional development.

❖ **Development Ken Characteristics -**

- **continuously Process** Development is a continuous process. This sequence of development continues till human The process of development continues from pregnancy to death. It keeps going continuously and never stops
- Development has a definite direction and a definite order. We also call it the stages of development. Infancy , childhood , adolescence and youth are the sequential stages of human development.
- Development is both quantitative and qualitative.
- Development is very flexible.
- Development is multi-dimensional i.e. in some areas it shows very rapid growth , while in some other areas it happens at a slow pace.
- Developmental changes are usually orderly, progressive and regular.
- Development can be contextual. It can be influenced by historical, environmental and socio-cultural factors.

❖ **Development Of various Dimensions**

1. physical development
2. mental development
3. emotional development

4. functional development
5. linguistic development
6. social development

- ❖ **physical Development :-** Body Of Baha Change As Growth in height , increase in body proportions etc. can be seen clearly , but the changes in the internal organs of the body are not visible ; but their proper development continues inside the body.
- ❖ **Mental Development :-** Mental Development From Meaning It is the increase and development of all the mental abilities and capabilities of the child , as a result of which he is able to use his mental powers adequately in solving different types of problems.
- ❖ **Emotional development :-** Emotion , also called feeling, means a state that affects the behavior of a person . Fear , anger , hatred , surprise , affection , happiness etc. are examples of emotions.
- ❖ **Functional development: -** Functional development means development of a person's working power , abilities and capabilities.
- ❖ **Linguistic development : -** Through language, a child expresses his thoughts and feelings to others and understands the thoughts and feelings of others.
 - Child between 6 months and 1 year He starts understanding and speaking only words.
 - At the age of 3 years, he starts speaking some small sentences and between 15 and 16 years, understanding of many words develops.

- ❖ **Social Development :** Social Development Of Literal Meaning
Would Is Society Of under staying various Aspects To Learning |
 - It is within society that character building , good behaviour (virtue) and practical education related to life etc. get developed.
- ❖ **Development** - Development is a lifelong process , which continues from birth to death
 - Development does not only refer to physical growth, but it also includes all physical , functional , cognitive, emotional and social changes.
- ❖ **Growth-** Growth means development of the physical structure of children which includes height , weight , thickness and development of other organs.
 - The process of growth takes place both internally and externally ; it continues till a certain age and is possible only in the physical aspect .
 - Heredity has both positive and negative effects on growth .

❖ **Growth And Development**

□ Growth 1. Growth Word quantitative Transformations are used for quantitative changes ➤ As Boy of Age rising Is So along with that , the length and breadth also increases , that is called growth. ➤ Growth Development Of a small Form It is a continuous process	□ Development 1 The word development is used for qualitative change, such as in a child efficiency , efficiency When there is growth then the word development is used. ➤ Development Word One Detailed Word Is. Growth Development Of only Part Is.
--	---

of development , Small Like phase Is. ➤ Growth of Process life system No moving yes. child Of full maturity This process in case of ends Is. ➤ Growth In being ones the changes that Is Him Normal form From Life In Been Seen Can Is ➤ Growth To We Measurements can also Are.	➤ Development Life till Walking wala Process Is. Growth of Kind Boy Of Mature being But it End No it occurs . ➤ Development To generally saw No Go Can Is. Because Person Of Life In it Indirect form , they are present in! ➤ Measuring generality of how development is difficult.
--	--

❖ **growth and Development to the Impressed to do Factors with**

1. nutrition-
2. growth
3. Panshanugat
4. Endothelial glands
5. gender
6. air and light
7. Physical action
8. Effect of environment
9. Economic status

❖ **growth of the Conditions**

1. Infancy
2. childhood
3. puberty
4. Young adulthood
5. Mature adulthood
6. Older adulthood

❖ **Infancy (Birth to 2 years)**

1. infancy , the development of the child depends entirely on the parents.
2. In this, physical and mental development of children takes place from birth till 2 years.
3. At this stage the child is completely dependent on the parents.
4. Emotional development also takes place in this stage and the speed of learning ability is fast in this stage.
5. When a newborn child progresses towards infancy , his need for love and affection starts increasing .

❖ **Childhood**

1. Early childhood (2 to 6 years of age)

- Lads Of external engagement being It seems Is. Children In to copy of A tendency begins to develop and imitation And repeat of The tendency is found.
- From a psychological point of view, this period is the best stage for learning a language. In this period, the child starts learning and speaking the language by imitation and copying.

❖ **Answer Childhood : (6 to 11) Year ,**

- this stage, intellectual , moral , social reasoning etc. develop in children .
- With the increase in interest in reading, memory power also develops.
- Group feeling develops in children i.e. playing in groups , living in crowds , making friends only with homosexual people etc.
- Understanding of the importance of discipline and rules in life , development of an inquisitive approach and a tendency to travel

❖ **Adolescence (11 to 18 years) of stage)**

- it is the time in which the child moves from childhood towards maturity.
- is seen along with changes in the physical structure of the person
- this stage, both height and weight of adolescents increase. Along with this, muscles also increase. There is an increase.
- Between the ages of 12 and 14, girls' height and muscle mass grow faster than boys, and between the ages of 14-18, boys' height and muscle mass grow faster than girls.
- During this period the reproductive organs start developing
- At this stage the tendency to make friends intensifies and social relations increase
- intoxication or crime in this condition to move toward there is a possibility
- In this stage, the intelligence of boys and girls gets fully developed.
- At this stage, they need proper guidance and advice from teachers , friends and guardians.

❖ **Youth adulthood (from 18 40 Year till)**

- Adolescence And Youth There is no fixed age of adulthood . This stage is achieved by attaining a certain maturity in human development .

❖ **Mature adulthood (40 to 65 years of age)**

- There is a decline in physical development i.e. hair turning grey , muscles becoming loose and wrinkles appearing on the face etc.

❖ **Older adulthood (above 65 years of age)**

- physical Capacity Of weak Happen.

- social , spiritual , religious and cultural inclination towards activities

❖ **Learning - Learning** means . - Learning

- learning One Process , which keeps the machine of life running and by which we acquire some knowledge or by which our behaviour changes. 1 Immediately after birth The child begins to teach
- Learning helps in the all-round development of personality. It helps in achieving the goals of life
- After learning a person becomes able to understand himself and the world .
- Note:- For example:- If a student is able to make some changes and produce something based on the knowledge of a subject, then his learning process will be called learning.
- Meaningful learning Solid things And Mental Ghotaks It is a productive process of presenting and changing things rather than a process of gathering and storing information

❖ **Statements of scholars regarding learning**

1. **According to Gates:** - " Learning is the transformation of behavior through experience" ,
2. **According to E.A. Peel,** "Learning is a change in the individual which occurs in response to changes in his environment."
3. **According to Crow and Coe,** " Learning is the acquisition of habits , knowledge and attitudes.

❖ **Development Of learning From Relationship**

1. Development Of various Aspects Of among themselves In close Relationship Is And From All learning To Affected Do Is.
2. physical Development Of High Situation of stage In learning Or learning of Process Intense This happens in a permanent

form and if the physical development is not in a good condition then the learning process slows down.

3. cognitive Development of Appropriate Situation only learning To High And Permanent makes Is.
4. Social Development of Effectiveness only effective learning Of route It punishes .
5. It is only through emotional stability that a child learns balanced work behavior.
6. Moral Development Of Base But only Student Moral Functions To And Activities To He learns.
7. Mental Development Of Base But only Boy By Logic , thinking and exploration related activities are learned.

❖ **Nature and characteristics of learning**

1. Learning continues throughout life.
2. Learning is change.
3. Learning is universal.
4. Learning is adjustment.
5. Learning is development. Learning is the organization of experiences.
6. Learning is purposeful .
7. Learning is an active process.
8. Digging is Discovery. Learning environment of Yield Is.

❖ **learning of Methods ,**

1. learning by doing
2. learning by imitation
3. learning by observation
4. learning by testing
5. learning by group methods

factors affecting learning

1. Learning method
2. willingness to learn
3. role of the teacher
4. evidence
5. maturity
6. Physical and environment Mental Health
7. environment and geographical factors
8. Social and psychological factors

❖ maturity

- ❖ maturity One Such Process Is Who The stages of growth and development in a child affect everything around. There is a deep relationship between maturity and learning. These are two sides of the same coin , because almost every activity of learning is based on maturity.
- ❖ **maturity Two Kind of would have been Is.**
 1. Physical Maturity
 2. Mental maturity
- ❖ maturity One developmental Process Is. whose under One Person Time Of together Wool All Features And Qualities To eclipse does Is whose foundation His Pregnancy In He has been kept in his cells since the time of his death .

Characteristics of maturity:

1. Maturation is also related to physical changes over time.
2. Quantitative and qualitative changes occur in maturity.
3. Maturity is the biological capacity of the cells of any organism And this is the process of functional development.
4. Maturation is a mental , physical and natural process which is necessary before the advent of any specific behaviour or before the acquisition of any behaviour .

❖ **learning of Ability And Learning Disabilities**

- **learning of Ability From Meaning Is That Child Any Thing To How much Quick Learn takes Is. Teacher Of By teach Lesson, To How much good From And ease From Understanding takes Is ,**
- **Learning disability means that these children cannot be identified as early as typical children. Children with learning disabilities live a normal life and do not have any kind of difficulty in their daily activities. They only have difficulties related to thinking , understanding and language.**
- **experiences significant difficulty in abilities such as listening , reading , writing , logic , mathematics , reasoning , etc., disproportionately. These difficulties are internal to any individual.**

❖ **learning unable Lads of Identification Three Type From of Go can Is :-**

- 1. Lower academic achievement than normally intelligent children and no abnormality in seeing or hearing.**
- 2. By the difference between ability and achievement .**
- 3. Different types of performance related to different types of fields "Children need a healthy body and a healthy mind for learning. Children need intelligence and mental powers . Children who have less than average these powers are called mentally retarded children with low learning capacity."**

❖ **learning Learning Disabilities : -**

- 1. Dyslexia - reading In unable ,
B - D , SAW - WAS**
- 2. Dysgraphia – writing problem .**
 - **Children face problem in writing in this**

3. Dyscalculia - calculation related problem .

➤ Problems with counting

4. Dyspraxia - motor skill problem

➤ Difficulty in walking, moving around, etc

5. Dysmorphia – thinking of oneself as more beautiful , taller , stronger

6. Dysthymia - a serious stress problem .

7. Aphagia - problem related to language communication.

8. Progeria - Looking old at a young age

9. Dysensia - inability to reason , poor memory

10. Bulimia - ability to consume food

11. ADHD – attentional ability.

➤ Cannot sit for long at one time means lack of attention

❖ **Sakhine Of For assessment**

1. assessment for learning

2. Before teaching- by teaching and learning do a first assessment

3. Prior Knowledge – Knowing the prior knowledge of the child

4. Entrance Exam

5. identification of interest

6. Knowing the Capacity

7. Practice

8. subject matter selection

9. Selection of teaching method

❖ **learning of Nature Lower Is -**

1. Learn Change Is ,
2. Learning is universal.
3. Learning is growth.
4. Learning is adaptation.
5. Learning is purposeful.
6. Learning is experience.
7. Learning is prudent.
8. Learning is active.
9. Learning is personal.
10. Learning is discovery.
11. Learning is transferable.
12. Learning is a product of the environment.

❖ **learning of Features -**

(i) Learning is an internal process which can be inferred on the basis of changes in behaviour of the organism.

(ii) Learning requires a relatively permanent change in behaviour or performance ability.

(iii) The behaviour changes involved in learning may be explicit or implicit or partially explicit.

(iv) Relatively more deviation is found in the behaviour occurring under learning.

(v) Learning involves modification of behaviour. But it is not necessary that this modification is always positive, i.e. we learn good things as well as bad things, so modification can be positive or negative.

Unit – 3 : Understanding Behavioural and Information Processing Theories of Learning

❖ Pavlova Of conditioned response The principle of

- Other names ⇒ Pavlov's classical conditioning theory
- Conditioned Response theory
- Classical conditioning theory
- 1. Pavlov was a Russian physiologist.
- 2. His full name was Ivan Patrovich Pavlov.
- 3. Born 26 September 1849 , Ryazan , Russia
- 4. Death- 27 February 1936 , Moscow , Russia
- 5. Pavlov is called the father of conditioning.
- 6. Pavlov was awarded the Nobel Prize in 1904 for his theory of conditioned response
- 7. Pavlov operated on the dog's paroid gland and collected saliva And he started his experiment.

❖ Pavlov By Did Went dogs But prayag ,

- Pavlov by Our Use Of For Wood Of One As such equipment Ready Did in which dogs To standing Did Go Could.
- dogs Of For This Type of Arrangement of Went Was That Need falling But One Fixed Time And Duration Of For dogs Of Front Meal brought Go Could. This equipment In bell Playable And Quick buttons were provided for serving food .
- **Pavlov was a physiologist.** So he attached a tube to the salivary gland of the dog , so that the saliva of the dog could be collected in a beaker placed at an appropriate place. This entire apparatus was placed in a sound proof chamber and the dog was made to stand in it.

- For the test, the dog was first given food by pressing the food button at a fixed time. As soon as the food appeared, it started salivating. In this situation, the food acted as a natural stimulus (NS) for the dog and salivating was its natural response (NR) or natural action .
- **the next phase of the experiment**, on the second day, Pavlov pressed only the button of the bell. On hearing the sound of the bell, the dog raised its ears but did not salivate. In this situation, the sound of the bell was an unnatural stimulus for the salivating action . Hence, saliva did not come out.
- **On the third day** Pavlov pressed the food button immediately after pressing the bell button. In this way, both the actions of the sound of the bell and the presentation of the food happened simultaneously in front of the dog. The result was that the dog raised its ears and also started salivating. Pavlov repeated the action of pressing the bell and food buttons simultaneously for several days and observed that after a few days, the dog started salivating as soon as the bell rang even without presenting the food.
- conditioned to receive food by the sound of the bell . Thus, Kum learnt that as soon as the sound of the bell was heard , food would appear in front of him.

❖ Customized response Principles , not educational value:

1. Through this principle, various habits can be developed in students. By doing any work repeatedly, it becomes a habit.
2. it Theory Lads In various Type of of attitudes Development does Is.

3. it Theory Teaching - Learning of Process In Emphasizes the importance of practice .
4. Lads To Letter Life to get And words Of Meaning teach Of For Too This Theory In Use Did Go Can Is.
5. This Theory Of Channel From Lads In advanced bad Habits To away Did Go Can Is.
6. Lads In Yield emotional instability Of Effective to treat In Too it Theory Assistant Is.
7. ksz*it Work In His it Theory Students In vested Requirements of Fulfilment But Force gives Is .
8. This Theory Of By Teacher External Odds But control , tax Can Is.
9. Teacher This Theory Of By Lads of personal Variations To Attention In By placing Teaching Work Tax Can Is.
10. Teacher This Theory Of It can also be used to remove fear , anxiety etc. from children .

❖ Adapted - Response Theory

Merits of the theory:

1. This Theory Of By Lads In Discipline of Emotions can be developed.
2. Beliefs on different types of attitudes in children Can be done.
3. Good habits can be developed in children
4. This principle is helpful in treating mental and emotional instability in children.

❖ the theory :

1. On the basis of this theory, success has not been achieved in explaining the physical basis of learning.
2. This principle cannot be applied to adults Can.

3. This theory lacks stability. On the basis of experiences, it is seen that by removing the stimuli, the response of the children also becomes ineffective.
4. This theory considers man as a machine , whereas man also performs his actions on the basis of his thinking power.

❖ **Skinner Of verb delivered response Active contract the principle of**

- Skinner by learning Of That Theory Of Rendering did . him Active conditioning Of Principle Said go Is. Active orientation From intention One Such learning Process From This is because of which the active behaviour gets sufficient strength through planned reinforcement and hence it gets repeated frequently in the desired form and the learner finally becomes capable of behaving as per the teacher's wish.
- This theory is also called the theory of instrumental contract or action-based contract.

❖ **Skinner by Second Use :**

- Skinner by Our learning Of Theory Of Rendering For In the year 1930 White He did an experiment on rats and for this he used a special type of box which is called Skinner box.

There was a small passage in this box in which a lever was attached which was connected to a cup. On pressing this lever, a sound was produced , light came on and a piece of food was put in the cup . | In this way, the rat keeps pressing the lever again and again and gets light and food. By pressing the lever, the rat learns the art of getting food and light. Lever Of Press ' Hearing a knocking sound or seeing light and getting food worked as reinforcement .

❖ **Skinner's second experiment:** Pigeon But Did. They One Hungry Pigeon To Box In closed Tax Gave. Pigeon a little Late Calm sat remained. As only Box In Light When the pigeon came , it started pecking. This gave it a grain of food. The pigeon does this action again and again and learns to peck by twisting the needle. In this process, an operant contract develops .

❖ **Skinner Of Active contract I Academic Importance**

1. Skinner Of Theory Of Base But text book To small - small Positions In to share But Force Gave go Is. By which learning Soon And becomes influential
2. Desired form and direction of students' behaviour This principle helps teachers to provide
3. This theory states that if students are made aware of the results of their efforts, then students can make more progress in their work.
4. This principle has been used for programmed learning.
5. Reinforcement is of utmost importance in operant conditioning. Reinforcement can take many forms , such as: punishment, reward , knowledge of results, etc.

❖ **Information Processing Model**

- Information Processing Of Meaning Would It is a method or principle of learning.
- This is a cognitive theory that examines how information enters memory, is stored, and is retrieved from it. This model emphasizes memory.
- According to this, there are three stores in the memory and the received information is processed and flows into them.

1. **sensational Memory:** In this Notifications First Entry does Is And Information store of a little Time Of For Would And After this the information disappears.
2. **Functional memory:-** This is called short-term memory. In this state also the information is not retained for a long time ; at most 15-20 seconds. Under this the person reacts as soon as he receives the information.
3. **long term memory** - The information stored in it can remain stored indefinitely. Therefore this memory is called It is called relatively permanent memory and hence its utility in human life is greater.
 - it Principle tells Is That like - like Children Mounting As their children grow older , their brains mature too , advancing their ability to process and respond to information they receive through their senses .

Unit 4 - Children Of Development And learning In Society of Role

❖ learning And Society In interrelationship

- Learn And Society Both One Others Of Supplement Person of Development Of For in Both of It is necessary. If any one of these is missing, development is not possible. A child first learns from his parents or other family members. Children imitate their elders and use them in life. Children learn whatever the elders teach them.
- After the family, the child goes to the society. There too he imitates and learns the behaviour of the people. The society wants that every person of the society should become a skilled , easy going and good citizen.

❖ **Social learning Theory (Bandura):**

1. Exponent Albert Bandura
2. Resident Canada
3. gave the theory → in 1977
4. Experiment → Barbie Doll , (Living Clown) Movie

❖ **Social learning Of Meaning :**

- Others To after seeing Their According Behaviour to because of and Others Of Behaviour To Our Life In Unloading And society and unusual Behaviors of The reason for abandonment is social learning is called Is.

❖ **Social learning social learning theory Albert Bandura**

- This Use In Lads To five minutes one of Movie appear Went. In this Three Group Create Went. Movie In One Big Like room In Very Sarah toy kept Was in that From One toy Very Big doll barbie doll Was. That Rooms In One Adult Person Went And Him elder Gudde (Bobby on the doll own aggression show Put. He dolls To He hits him . Throws him on the floor , kicks him. After this, this film was made in three versions . Went ,
- **One Movie** In Lads Of First Group by saw That aggressive Behaviour to ones to the child (model) Awarded Did Went.
- **Second Movie** In Lads Of Others Group In saw That That The boy was punished for his aggressive behaviour.
- **the third film,** the third group of children did not see that the boy was not rewarded And neither was punished.

- Movie to see to all the children after left alone in the toy room and Groups of children were observed secretly. Finally, it was observed that the children who had seen the film in which aggressive behaviour towards the toy was being rewarded were the most aggressive towards the toy. They were showing.
- Those children who had witnessed punishment for aggressive behavior appeared to be less aggressive overall .
- Therefore From this it clear Would Is That All Lads by aggressive seen And His Simulation Too There are three factors that make it happen:
 1. model learning
 2. Observation or inspection
 3. Simulation
- learning Principle of Process In Any Model By seeing someone , one has to imitate his behaviour and adopt it in one's own behaviour in order to repeat it in the future

❖ **Person This Type learns Is :-**

- (1) Pay attention to and understand behavior.
- (2) recalling the behavior
- (3) Reinforcement after behaviour: Therefore, for learning, change in behaviour takes place only through imitation.

❖ **Albert Bandura by Explain the 4 steps of simulation .**

- (1) **Attention** - To attract the attention of the observer the model must be attractive, popular, interesting and successful.
- (2) **perception** - The individual absorbs the behaviours as true descriptions by forming models in his mind.
- (3) **Re : Submission** : - Which we wear after looking at it carefully , and after wearing it, we will present it again.

- (4) **Reinforcement** - Where we will do the task again when we get positive reinforcement And when we get negative reinforcement, we will not repeat that behavior again.

❖ **Social learning Principle of Specialties**

- (1) According to this theory, a person learns only those behaviours which catch his attention and which influence him.
- (2) Emphasis on the behavior of the individual. Emphasis on learning by imitation.
- (3) A person conducts most of his life's behavior in a manner guided by this personal principle.

❖ **Social learning Principle Of Educational Importance**

- (1) Teacher Students Of Present models of ideal behavior in front of you .
- (2) Teachers should encourage students to observe independently.
- (3) Exemplary co-curricular activities in school should be organised.
- (4) The school environment should be such that children can learn by seeing.
- (5) Teachers can develop self-efficacy in students by giving confidence-building messages and showing the success of other people.

❖ **Vygotsky Of Social Development Of Theory ,**

- Soviet Russian psychologist Lev Vygotsky propounded a theory related to social development in children . In this theory, he said that the society of the child has a special contribution in every kind of development of the child.

- **Vygotsky said that as a result of mixing with the society, different types of The type of facilities available to him in the society , his development will be in the same way**
- **At the time of birth, the behaviour of the child is far from sociality. He is extremely selfish. He is only interested in fulfilling his physical needs and does not care about the welfare of others. At this age, he is unable to understand the difference between inanimate objects like dolls, toys , statues etc. and living beings like animals, birds , humans etc.**
- **The range of social contact of a child is very limited. Hence, not much can be expected from them from the viewpoint of social development . As soon as they enter childhood, most children start going to school. They do this and now their social circle becomes very wide.**
- **At this age , most boys and girls are active members of their peer group.**
- **Sympathy , cooperation , goodwill , charity and sacrifice – this wonderful harmony can be seen in this state**
- **Adolescence is also a stage of intense expression of emotions. At this stage, the area of specific interests and social contact is also very wide.**
- **The implication of Vygotsky's theory of social development is 'collaborative problem-solving ' , that is, children are able to solve problems that they had previously solved in their class with the help of their peers as per the instructions of their teacher. I have seen it.**

❖ **Vygotsky Of Theory of features Following Is :-**

- (1) **ZP D has an important place in the learning process .**

- (2) Learning is a universal process that continues throughout life.
- (3) The measures of cultural organizations and psychological facts are responsible in the process of learning.

Educational implications-

1) Self-discipline - For primary students, Vygotsky believed that more and more socially strong and semi-complete activities should be encouraged in the area of proximal development of the children and every effort should be made to instill self-confidence in them.

2) Literacy Activities - Vygotsky's theory emphasizes literacy activities once children begin formal schooling.

3) Reciprocal teaching - It is an educational innovation inspired by Vygotsky's theory in which a teacher and two to four students form a collaborative learning group.

4) Collaborative learning - In this there is a small group of students, in which they clear their misconceptions by providing adequate and complete explanation to each other.

Unit-5 Factors Affecting Learning

- ❖ **Motivation - Motivation** is a transformation of English word Motivation, which is originated from Latin language, meaning: - Hindi translation of the word is " MOVE, motor, motion i.e. movement or action"
 - The literal meaning of motivation is the presence of the will power to do a task.

- **Motivation is the internal force that drives a person to take action.**
- **The stronger the motivation of a person, the stronger will be his learning ability. It has also been said: - " The motivation is better than learning"**
- **Motivation always creates curiosity in students to learn and keeps them constantly active , that is why B.F. Skinner has described motivation as the highway to learning .**

❖ **Motivation is mainly divided into two parts Bataaen Went**

- (1) **Internal motivation**
- (2) **external External Motivation**

❖ **internal Internal Motivation :**

- **They internal The forces which motivate a person's behaviour are called internal motivation.**
- **Intrinsic motivation refers to self-interest. When a student learns a lesson because he is interested in it, it is called intrinsic motivation. Example: - Hunger , desire , sleep , love and work.**

❖ **external External motivation :**

- **external motivation First From Determined Any As such Objective which get to do Person Of Objective Yes , it is called external motivation.**
- **meaning of extrinsic motivation It is done by the encouragement which is given to the student from the external environment. In this, work is done not for mental happiness but to achieve some goal or to get reward etc. or to get happiness as a goal in the future.**

- **Example:- Interest , desire , self-respect , social prestige and special achievement are the main examples of motivators and rewards.**

❖ **Motivation Features of :-**

- 1) **Motivation Person Of Thoughts And Aspirations Of Result Is.**
- 2) **Motivation is the main source of fulfilling needs. 3) It also helps in character building.**
- 3) **It provides energy to do some work.**
- 4) **This is the excited state of our body.**
- 5) **It gives strength to our behavior**
- 6) **Motivation has many characteristics but first of all it inspires us to reach our set goals.**
- 7) **Motivation is a symbol of dynamism and activity. To motivate students through emotional expression, teachers use this method. Motivation to complete any task One Source Is.**
- 8) **Motivation stimulates a person's behaviour.**
- 9) **Motivation is the process of stimulating , sustaining and controlling an activity.**
- 10) **provides energy to do some work .**

❖ **Some? Psychologist of Opinion Motivations Of Per**

- 1) **The desire to work towards a goal for which there was no attraction earlier , Excitement is motivation" ,**
- 2) **According to Woodworth: - "Motivation is that condition of a person which stimulates him to perform a certain behavior and to achieve a certain goal.**

❖ **Elements of Motivation**

- 1) **Positive motivation**
- 2) **Negative motivation**

❖ **Positive Inspiration :-** This Inspiration In Boy Any do the work on your own volition He does this work. He gets happiness and satisfaction by doing this work. This is called positive motivation .

❖ **Negative motivation -** In this motivation the child can complete any task on his own not as per the wish of someone else but as per the wish of someone else or It does so because of the barrier effect. By doing this he achieves some desirable or definite goal.

❖ **Educational importance of motivation: -**

1. learning In Incentive Of For
2. Discipline advanced to Of For ,
3. route Visit Of For ,
4. Social And characteristic Qualities Of For development.
5. more and more Acquisition of knowledge Of For.
6. for achieving the target

❖ **Attention**

- We Our Life In many Type we see some things , we hear about some We are attracted to something else and our attention is diverted automatically. All these activities are called attention .
- Meditation is the idea of presenting something clearly in front of the mind. is the process of.
- Meditation is an activity in which a person tries to bring his mind into a special state of consciousness.
- mental peace , concentration , morale , search of God , making the mind thoughtless , controlling the mind etc.

Key features of attention

- attention One Such Process Is whose By Child Some? Stimuli To Our Consciousness Center In brings So that we can perceive it properly. Therefore, the process of attention comes first and

the process of perception comes later. The main characteristics of attention are as follows:-

- 1. Attention is selective .**
- 2. Attention involves body posture .**
- 3. Attention is a state of readiness or responsiveness .**
- 4. Attention is purposeful .**
- span of attention is limited.**
- 6. Attention has the quality of fluctuation and shifting .**

❖ attention Of Educational Implications

- **attention of Process Of Importance Education In Enough Is.**
From this Both the teacher and the child get help in performing their respective roles. We can understand the importance of attention in education through the following points:-

- 1. In the class, the teacher should attract the attention of the child in the process of teaching-learning. For this, he can use external factors of attention such as change in stimulus , recurrence of stimulus , change in its size , etc. With the help of these, the teacher can make his teaching more interesting and the children start paying attention on their own.**
- 2. The teacher should create a positive atmosphere in the classroom so that the child does not feel any fear or compulsion. Therefore, to maintain the attention of the child, the teacher should maintain a happy atmosphere.**
- 3. Teachers can use games , pictures , toys and stories to attract children in the classroom, especially when the children are small .**

4. Children should show more interest in the teacher's words and their reading material and pay more attention to them. For this, it is necessary that the language of the class should be easy because the rule of attention is that a child cannot pay attention to those things or objects whose meaning is not understood by the child.

5. To attract the attention of the child, the teacher should use participatory teaching methods like cooperative teaching method , laboratory method , brainstorming method etc.

❖ **Commemoration** - Memory is the mental process that involves recalling past knowledge , experiences, or skills It is recalled again.

- Our Experiences To Accumulated Keeping And to them get to Of Some? Time after Consciousness Of Area In bring of Who Power in us would have been Yes , that is called memory.
- memory is the direct use of what has been learned
- Recalling any learned subject or activity when required is called memory.

memory -

1. **Sensory Sensory memory** Sensory memory is the memory storage in which children can retain information for a period of one second or less. It is of two types - image-related memory and echoic memory in which children can retain the visual trace of the things and objects seen and the auditory trace of the sound heard in their minds for up to 1 second respectively.

2. **Short- term memory** William James has also called it primary memory. In this, a subject or event is retained for a maximum of 20 to 30 seconds and the child learns its subject in one or two attempts only , such as an unfamiliar phone number.

3. Long - **term memory** - William James has also called it secondary memory. In this type of memory, a child remembers a lesson , an event etc. for at least 30 seconds and remembers it for a maximum of several days , such as his birthday , name etc.

❖ **Commemoration of Characteristics of Memory**

1. **Quick understanding** - A child who has a good memory understands anything very quickly .
2. **Quick recall** - A child who has a good memory can instantly recall any past experience when required.
3. **Early recognition** - A child with a good memory can quickly recognize a child or place related to previous experience.
4. **Durability of retention** – A characteristic of a good memory is how long a child can remember something.
5. **Forgetting useless things** - It is better to forget useless things. Therefore, the child should remember only those things which are useful for the future.

THANK YOU SO MUCH

TEAM – FUTURE ONLINE CLASSES SONPUR
